SAFETY-RELATED COMPONENT WARNING !!

COMPONENTS IDENTIFIED BY MARK ▲ OR DOTTED LINE WITH MARK ▲ ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

ATTENTION AU COMPOSANT AYANT RAPPORT À LA SÉCURITÉ!!

LES COMPOSANTS IDENTIFIÉS PAR UNE MARQUE ▲ SUR LES DIAGRAMMES SCHÉMATIQUES ET LA LISTE DES PIÈCES SONT CRITIQUES POUR LA SÉCURITÉ DE FONCTIONNEMENT. NE REMPLACER CES COMPOSANTS QUE PAR DES PIÈCES SONY DONT LES NUMÉROS SONT DONNÉS DANS CE MANUEL OU DANS LES SUPPLÉMENTS PUBLIÉS PAR SONY.

SECTION 1

SERVICING NOTE

SAFETY CHECK-OUT

After correcting the original service problem, perform the following safety checks before releasing the set to the customer:

Check the antenna terminals, metal trim, "metallized" knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.

LEAKAGE

The AC leakage from any exposed metal part to earth Ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5 mA (500 microamperes). Leakage current can be measured by any one of three methods.

1. A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers' instructions to use these instruments.
2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.
3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The "limit" indication is 0.75 V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-63Trd are examples of a passive VOM that is suitable. Nearly all battery operated digital multimeters that have a 2V AC range are suitable. (See Fig. A)

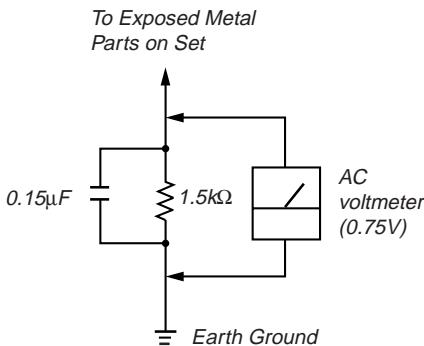

Fig. A. Using an AC voltmeter to check AC leakage.

RV901 of Main Board

RV901 of the main board requires no adjustments. Please note that it should be fixed to mechanical center position when you moved and do not know origin position.

Connection and Test Disc

Connection of this unit to a AC-3 Dolby surround equipment will realize outstanding sound playback.

Check if the respective surround channel outputs are playing back normally by the following method.

Jig :

Description	Part No.
AC-3 TEST LD	J-2501-132-A

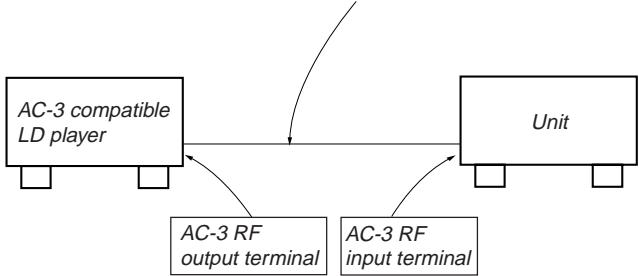

Connected Equipment:

AC-3 LD player

(This unit is also compatible with the digital versatile disc player (DVD). The DVD must be checked with the LD player using all the circuits of this unit.)

Connecting Method:

AC-3 RF output terminal Coaxial digital connecting cable VMC-10G, etc. (Optional)

Checking Method:

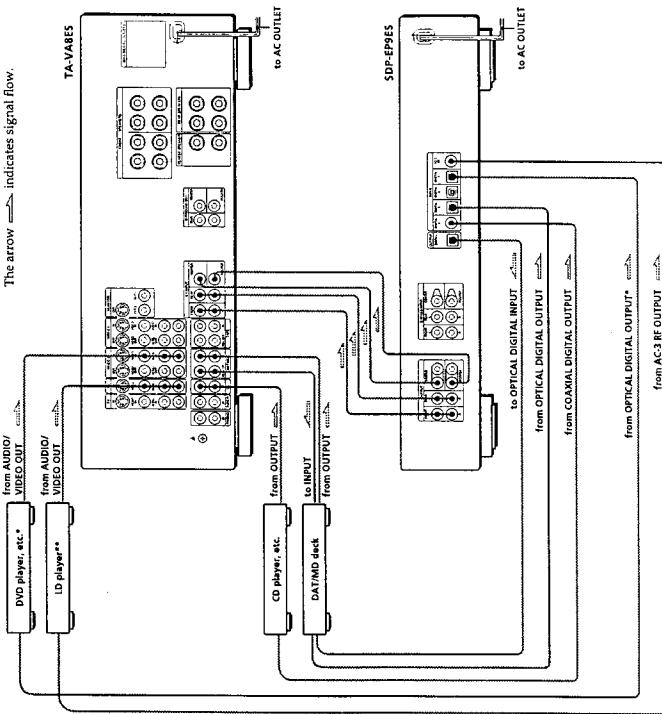

Play back a test disc of the LD player, and check if the contents recorded on the disc case (printed on the disc case) are played back normally.

SECTION 2 GENERAL

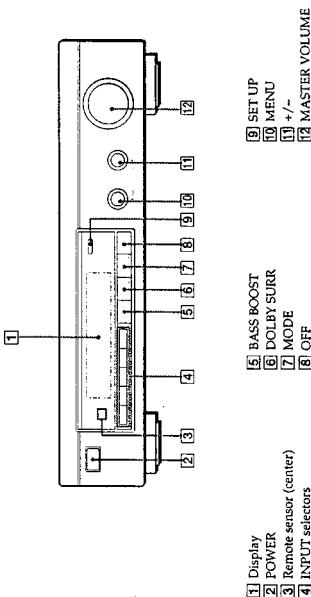

This section is extracted from instruction manual.

Getting Started

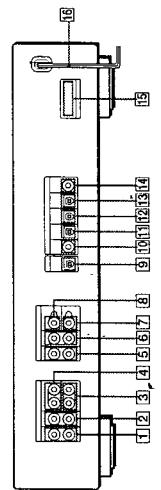

Connecting an amplifier with 5.1 ch inputs (such as the Sony TA-V8ES, etc.)

Front Panel Descriptions

Rear Panel Descriptions

- If your DVD player has a COAXIAL DIGITAL OUTPUT, we recommend connecting the DVD player's COAXIAL DIGITAL INPUT to this unit's DIGITAL INPUT 4 (COAXIAL IN) instead of making the optical connection shown above.
- If your LD player has an optical digital output, connect it to one of the DIGITAL INPUT 1-3 jacks on this unit. This connection can be used together with the AC-3 RF connection.

(continued)

If you have an additional surround amplifier with pre-out terminals (such as a Sony TA-E200E or SD), you can connect it to this unit's BYPASS INPUT jacks. The signals from the connected amplifier will be output without alteration from this unit's OUTPUT jacks when you select BYPASS (see Page 11 for details).

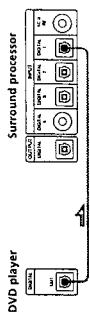

If you have an additional center speaker or active subwoofer Connect the other CENTER OUTPUT terminal to the input on the amplifier for your other center speaker. Connect the other WOOFER OUTPUT terminal to the input terminal on the active woofer.

Hookups

The arrow indicates signal flow.

DVD player

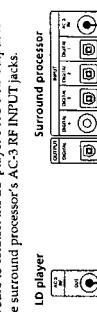

Be sure to connect the DVD player's digital output to one of the surround processor's DIGITAL INPUT 1-4 jacks.

If your DVD player has a COAXIAL DIGITAL OUTPUT, we recommend connecting the DVD player's COAXIAL DIGITAL INPUT to the this unit's DIGITAL INPUT 4 (COAXIAL IN) instead of making the optical connection shown above.

LD player

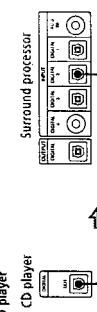

Be sure to connect the LD player's AC-3 RF output to the surround processor's A-C-3 RF INPUT jacks.

If your LD player has an optical digital output, connect it to one of the DIGITAL INPUT 1-3 jacks on this unit. This connection can be used together with the AC-3 RF connection.

CD player

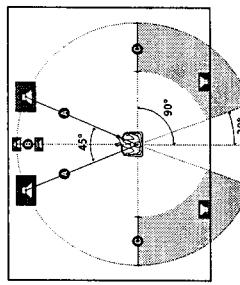

Be sure to connect the surround processor's digital output jack (DIGITAL OUTPUT) to a DAT/MD deck.

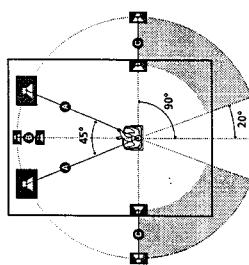

What cords will I need?

- Optical digital connecting cord (not supplied)
- Coaxial digital connecting cord (not supplied)

Depending on the shape of your room (etc.), you may wish to have the rear speakers behind you instead of on the side walls. One advantage of this placement is that you can use a pair of large floor standing speakers matching your front speakers.

Note
If you place the rear speakers behind you, be sure to check the speaker location setting in the SP SET UP menu when using VIRTUAL MULTIREAR and VIRTUAL REAR SHIFT sound fields (see Pages 8 and 13 for details).

Notes

- Do not place the center or rear speakers farther away from the listening position than the front speakers.

• When mounting the rear speakers on side walls perpendicular to the listening position they should be placed 60-90 cm above the listening position.

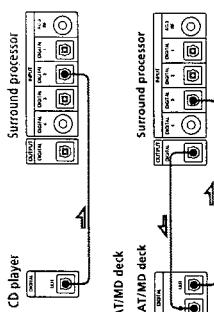

Rear speaker

60 - 90 cm

Front speaker

Note
This unit is only compatible with digital components using 32 kHz/44.1 kHz/48 kHz sampling frequencies. It is not compatible with 96 kHz.

Speaker Set Up

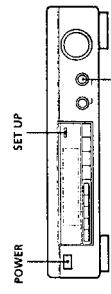

Speaker Set Up

To obtain the best possible surround sound, first specify the type of speakers you have connected and their distance from your listening position. Then use the test tone to adjust the speaker volumes to the same level.

Initial setting is **CENTER SP (LARGE)**.

- If you connect large speakers that will effectively reproduce bass frequencies, select **LARGE** (WIDE mode).
- If you connect small speakers with minimal bass reproduction, select **SMALL**. To activate the Dolby Digital (A3.1) mode, redetect circuitry and output at the center channel has been selected from the front speakers, subwoofer or other frequencies ("LARGE" speakers (NORMAL A.M. mode)).
- If you do not connect the center speaker, select "NO" (PHANTOM mode).

Specifying the speaker type and distance

front speaker size

Speaker size

Speaker settings
Initial speaker settings are: FRONT SP (LARGE). If you connect large speakers that will effectively reproduce bass frequencies, select "LARGE". If you connect small speakers with minimal bass response, select "SMALL" to activate the Dolby Digital (AC-3) bass redirection circuitry and output the front channel bass frequencies from the subwoofer or other "LARGE" speakers.

Initial setting is "CENTER SP (LARGE)"

- If you connect large speakers that will effectively reproduce bass frequencies, select "LARGE" (WIDE mode).
- If you connect small speakers with minimal bass response, select "SMALL" to activate the Dolby Digital (3D) bass redirection circuitry and output the center channel bass frequencies from the front speakers, subwoofer or other "LARGE" speakers (NORMAL mode).
- If you do not connect the center speaker, select "NO" (PHANTOM mode).

Initial setting is REAR SP (LARGE)
If you connect large speakers that will effectively reproduce bass frequencies, select "LARGE".
If you connect small speakers with minimal bass response, select "SMALL". At this time, Digital AC3™ can be reproduced correctly and output from the rear channel has no returns from the subwoofer or other "LARGE" speakers. If you do not connect rear speakers, select "NO" (31C mode).

- Rear speaker position**
 - Initial setting is **REAR** **FP** **1 SIDE**
 - This parameter lets you specify the location of your rear speakers, for proper implementation of the Digital Cinema Surround, VIRTUAL REAR SHIFT and VIRTUAL MULTI REAR MODES. Refer to the location below.
 - Set to SIDE if the location of your rear speakers corresponds to section A.**
 - Set to BEHIND if the location of your rear speakers corresponds to section B.**
 - This setting affects only the VIRTUAL REAR SHIFT and VIRTUAL MULTI REAR modes.**

Adjusting the speaker volume

You can switch the unit on and off easily by using the **CUSTOMIZE** menu. For details about the mode, see page 15.

For details about the distance unit parameter, see page 17.

Use the remote while seated in your listening position to adjust the volume of each speaker.

Initial setting is “SUB OFFER (YES)**”**

- You connect a sub woof er, select “YES” to output the LFE (low frequency extension) channel from the sub woof er.
- If you do not connect a sub woof er, select “NO”. This activates the Dolby Digital (AC-3) bass reduction function and outputs the LFE signals from other speakers.

In order to take full advantage of the Dolby Digital (AC-3) bass reduction circuitry, we recommend setting the sub woof er cut off frequency as high as possible. However, when using a sub woof er with 5.1 ch inputs, such as the sub woof er, set the sub woof er cut off frequency to 80 Hz.

The diagram illustrates the speaker system setup. It features two front speakers (labeled '2') positioned on either side of a central component. A center channel speaker is located below the front speakers. Two rear speakers (also labeled '2') are positioned at the bottom corners. A horizontal line labeled 'MASTER VOLUME' extends from the right side of the central component towards the top right corner of the diagram.

- centered at 800 Hz for easier speaker volume adjustment.

 - 1 Press TEST.**
Set the distance from your listening position to the center speaker:
 - Center speaker distance can be set in 0.1 meter steps from a distance equal to the front speaker distance. (④ on page 7) or a distance 1.5 meters closer to your listening position (⑩ on page 7).
 - Do not place the center speaker farther away from your listening position than the front speakers.You will hear the test tone from each speaker in sequence.
 - 2 From your listening position, use the remote to adjust the volume of each speaker so that the test tone can be heard at the same level from all speakers.**
A Press FRONT, BAL, or R to adjust the balance between the front speakers and with remote control. ↗

Adjusting the speaker volume

You can switch the units from *level* by using the distance unit parameter in the *CUSTOMIZE* menu. For details about the menu mode, see page 15. For details about the *distance unit* parameter, see page 17.

Use the remote while seated in your listening position to adjust the volume of each speaker.

- centered at 100 Hz for easier speaker volume adjustment.

1 Press TEST. You will hear the test tone from each speaker in sequence.

2 From your listening position, use the remote to adjust the volume of each speaker so that the test tone can be heard at the same level from all speakers.

A Press FRONT BALL or R to adjust the balance between the front speakers. Press BACK to adjust the balance between the rear speakers.

- ④ During this adjustment, the test tone is emitted from both speakers simultaneously.
- ⑤ Press REAR L ALL or R to adjust the balance between the rear left and right speakers (± 8 dB, 0.5 dB/step).
- ⑥ During this adjustment, the test tone is emitted from both speakers simultaneously.
- ⑦ Press CENTER L (0 dB) to adjust the level of center speaker (0 dB to 5 steps).
- ⑧ During this adjustment, the test tone is emitted

3 Press TEST to turn off the test tone.

speakers (0.5 dB/steps). During this adjustment, the test tone is emitted from both speakers simultaneously.

(continued)

五

Getting Started

💡 To adjust the volume of all the speakers at one time.
Use MASTER VOLUME on the processor, remote, or your multichannel processor.
When using an amplifier with 5.1 ch inputs, set this unit's MASTER VOLUME to -20 dB (near the center position) and adjust the amplifier's volume control.

💡 To set the test tone to a specific channel,

Set the menu mode to EXPAND and use the test tone parameter in the LEVEL ADJUST menu to select the channel you desire.

For details about the menu mode, see page 15.

For details about the test tone parameter, see page 15.

Notes

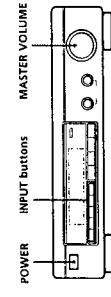

- The front balance, rear balance, center level, and rear level are shown in the display during adjustment.
- Although these adjustments can also be made with the LEVEL ADJUST menu using the knobs on the front panel, we recommend you follow the procedure described above and adjust the speaker levels from your listening position using the remote control.

Selecting a Component

To listen to or watch a connected component, first select the function on the processor or with the remote.

Before you begin, make sure you have:

- Connected all components securely and correctly as indicated on page 4 to 7.
- Turned MASTER VOLUME to -20 dB (near the center position) (when using an amplifier with 5.1 ch inputs).
- Turned MASTER VOLUME to -∞ dB (when using separate amplifiers for each speaker).

1 Press POWER to turn on the processor.

2 Press an INPUT button to select the component you want to use:

To listen to or watch

Press

An LD player connected to the AC-3 RF INPUT jack

The component connected to the DIGITAL 1, 2, or 3 DIGITAL 1, 2, or 3 optical input jack*

The component connected to the DIGITAL 4 DIGITAL 4 coaxial input jack.

The component connected to the BYPASS**

- This unit's digital inputs detect Dolby Digital (AC-3) or PCM signals automatically. (The AC-3 RF input terminal for use with LD players is for Dolby Digital (AC-3) signals only.)
- The menu functions may not be available when the unit is set to the "BYPASS ON" mode.

- If you connected an additional audio amplifier (etc.) to the BYPASS IN jacks on the processor as described on page 6, use the function selector on that component to select the component you want to listen to ("CD" for example).
- This unit switches to the "BYPASS On" mode while its POWER is set to off.

3 When connected to an amplifier with 5.1 ch inputs, turn on your amplifier; select the respective component, then select LINE 5.1 channel input.

EXAMPLE: Turn FUNCTION to select "LD", then press 5.1 INPUT (for SONY TA-V40ES). At this time, set the MASTER VOLUME control on your amplifier to "0".

4 Turn on the source component, the LD player for example, and start playback.

5 Use the MASTER VOLUME on your amplifier to adjust the volume.

To

Do this

Mute the sound

Press MUTING on the remote.

Reinforce the bass

Press BASS BOOST to turn on the B-BOOST indicator.

Turn off the display

Press DISPLAY on the remote.

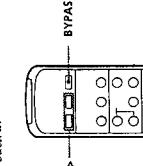

Adjust the level of the subwoofer

Press the SUB WOOFER +/- on the remote.

- In order to take full advantage of the Dolby Digital (AC-3) bass reduction circuitry, we recommend setting the subwoofer's cut off frequency as high as possible. However, when using an amplifier with 5.1 ch inputs, set the subwoofer's cut off frequency to match the characteristics of the amplifier.

Using the remote

The remote lets you operate the processor. EXAMPLE: To listen to Dolby Digital (AC-3) encoded Laserdisc played back in

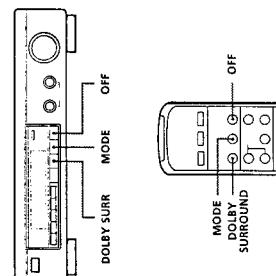

- Press POWER on the front panel to turn on the processor.
- Press INPUT SELECT </> to repeatedly display the input for the component you want to use (or press BYPASS to display "BYPASS ON").

- EXAMPLE: If you connected your LD player to the AC-3 RF INPUT, select "AC-3 RF".

Processor Operations

Selecting a Surround Field

You can select a surround field according to the type of source you are playing. When playing program sources recorded in the Dolby Digital (AC-3) format, you can enjoy surround sound simply by selecting "DOLBY SURROUND". This unit also incorporates several pre-programmed sound modes called "Digital Cinema Sound". Select from these surround modes according to your preference to enjoy powerful surround effects from a wide variety of program sources.

To select the Dolby Surround mode

Press DOLBY SURROUND. Normally, select this mode when playing program sources recorded in the Dolby Digital (AC-3) format.

To select Digital Cinema Sound

Press MODE repeatedly until the mode you desire appears in the display. See the chart on the following page for details regarding the types of surround modes available and the effects they provide.

When you select DOLBY SURROUND. When the signal being input is PCM, normal 2 channel playback occurs. When the signal being input is Dolby Digital (AC-3), the number of channels played back are determined automatically according to the characteristics of the input signal. In the DOLBY SURROUND mode the number of channels being played back from the current program source appear in the display as shown below.

Display

STEREO PCM [x 1 kHz]*

Normal PCM playback

DOLBY DIGITAL [x 10 kHz]**

Center only (mono)

DOLBY DIGITAL [x 2 kHz]

Front (L, R) + Rear (mono)

DOLBY DIGITAL [x 2 kHz]

Front (L, R) + Center

DOLBY DIGITAL [x 1 kHz]

Front (L, R) + Center + Rear (mono)

DOLBY DIGITAL [x 2 kHz]

Front (L, R) + Center + Rear (mono)

DOLBY PRO LOGIC

Front (L, R) + Center + Rear (mono)

* 48 kHz, 44.1 kHz or 32 kHz is displayed as "44 kHz". ** The surround effect may not be readily apparent in all cases.

When playing a 2 channel Dolby Digital (AC-3) source, the unit determines either Pro Logic or Stereo playback automatically according to the information provided by the program source.

You can find Dolby Surround-encoded software by looking at the packaging. Use discs with the logo. In order to enjoy Dolby Digital (AC-3) playback, you must use discs bearing this logo.

Press DOLBY SURROUND. Normally, select this mode when playing program sources recorded in the Dolby Digital (AC-3) format.

To turn off the surround effect (2 channel stereo playback)

Press OFF (or DIGITAL CINEMA SOUND-OFF on the remote). At this time Dolby Digital (AC-3) signals are automatically downmixed to front (L, R) signals.

Processor Operations

Digital Cinema Sound	Surround mode	Effect	A	B	C	D	E	F	G	H	I	J	K	L
	NORMAL SURROUND	Decodes programs processed with Dolby Surround. Use to encode 2 ch sources using Dolby Pro Logic decoding.												
	ENHANCED SURROUND	Provides a greater sense of presence from front logic sources with monaural rear channel sound. Produces a stereo like effect in the rear channels.												
	LARGE THEATER	Replicates the acoustics of a standard movie theater.												
	CINEMA STUDIO A	Replicates the sound characteristics of the Sony Pictures Entertainment "Cary Grant Theater" film production studio.												
	CINEMA STUDIO B	Replicates the sound characteristics of the Sony Pictures Entertainment "Kim Novak Theater" cinema production studio.												
	CINEMA STUDIO C	Replicates the sound characteristics of the Sony Pictures Entertainment scoring stage.												
	VIRTUAL ENHANCED SURROUND A	Uses 3D sound imaging to create virtual rear speakers from the sound of the front speakers without using actual rear speakers. The virtual speakers are reproduced as shown in ill. 1.												
	VIRTUAL ENHANCED SURROUND A (ill. 1)	ILLUSTRATION												
	VIRTUAL ENHANCED SURROUND B (ill. 2)	Uses 3D sound imaging to create virtual rear speakers from the sound of the front speakers without using actual rear speakers. The virtual speakers are reproduced as shown in ill. 2.												
	VIRTUAL REAR SHIFT	Uses 3D sound imaging to shift the sound of the rear speaker to the actual speaker position. The shift position differs according to the setting of the rear speaker position (SP. SETUP).

	For REAR SP (SIDE)*	ILLUSTRATION												
	For REAR SP (BEHIND)*	ILLUSTRATION												
	For REAR SP (SIDE)*	ILLUSTRATION												
	VIRTUAL MULTI REAR	Creates a simulated surround sound from monaural sources such as old movies or TV programs.												
	For REAR SP (BEHIND)*	ILLUSTRATION												
	For REAR SP (BEHIND)*	ILLUSTRATION												
	For REAR SP (BEHIND)*	ILLUSTRATION												
	For REAR SP (BEHIND)*	ILLUSTRATION												
	For REAR SP (BEHIND)*	ILLUSTRATION												

* See page 8 for details on how to set the rear speaker position.

(continued)

Adjusting the Surround Effect Level (for Digital Cinema Sound modes only*)

You can adjust the surround effect level. This control lets you adjust the "presence" of the current Digital Cinema Sound mode from 0% (no digital cinema sound effects) to 100% (150%) in 5% steps.

- This adjustment is not possible in the NORMAL SURROUND or ENHANCED SURROUND mode.

1 Start playing a program source.

2 Press DIGITAL CINEMA SOUND MODE on the remote repeatedly to select the mode you desire.

3 Press EFFECT + or - on the remote to select the level you prefer. The effect level is indicated in the display during the adjustment. The level is stored automatically.

Note

Changing the effect level may not produce major variations in the surround effect when used with certain playback sources.

4 You can also adjust the surround effect level using the controls on the front panel. Use the MENU and the +/- knobs to adjust the surround effect level parameter in the SURROUND menu. See page 15 for details on menu operations and the surround effect level parameter.

Compressing the dynamic range (Dolby Digital (AC-3) only)

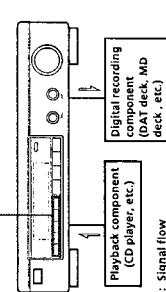

When inputting a Dolby Digital (AC-3) signal you can compress the dynamic range of the sound track by using the dynamic range compression parameters in the SURROUND menu. This may be useful when you want to watch movies at low volumes late at night. See page 15 for details on menu operations and page 16 for details on the dynamic range compression parameter.

EXAMPLE: Recording a CD using a DAT deck.

See your DAT or CD player's instruction manual if you need help.

- 1 Press DIGITAL 1 (if a CD player is connected to the DIGITAL 1 INPUT) to select the CD player.
- 2 Insert a blank digital audio tape into the DAT for recording.
- 3 Start recording on the DAT and then start playing the CD you want to record.

Note
You cannot record the digital signal from a Dolby Digital (AC-3) program source.

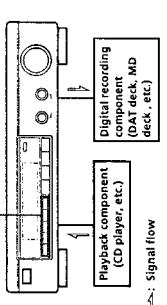

Digital Recording

This processor makes it easy to make digital recordings from the components connected to the processor. You don't have to connect playback and recording components directly.

Before you begin, make sure you've connected all components properly.

INPUT buttons

Settings and Adjustments

The menu operations allow you to customize various aspects of the processor to suit your listening environment, your speakers, your components and your personal preferences. You can select between two menu modes (basic and expand) according to your needs.

- The basic menu mode (BASIC) lets you make general adjustments to the sound fields and adjust all speaker settings simultaneously.
- The expanded menu mode (EXPAND) lets you make precise individual adjustments to the equalization and low cut frequency of the front, center, and rear speakers, and determine the default settings for the digital inputs.

Note

If you switch from EXPAND mode to BASIC mode, the adjustments made in the EXPAND mode are retained. However, if you adjust parameters from the same menu in the BASIC mode, those settings change accordingly. For example, when you switch to the BASIC mode, the individual tone controls for each speaker (in the EQUALIZER menu) are preserved. However, a single adjustment to the general tone controls in the SURROUND menu sets all speaker equalizations to the front speaker settings.

EXAMPLE: Recording a CD using a DAT deck.

See your DAT or CD player's instruction manual if you need help.

- 1 Press DIGITAL 1 (if a CD player is connected to the DIGITAL 1 INPUT) to select the CD player.
- 2 Insert a blank digital audio tape into the DAT for recording.
- 3 Start recording on the DAT and then start playing the CD you want to record.

Note
You cannot record the digital signal from a Dolby Digital (AC-3) program source.

Initial setting is FRONT L — R

Let's you adjust the balance between the front left and right speakers.

Initial setting is REAR L — R

Let's you adjust the balance between the rear left and right speakers.

Initial setting is REAR LEVEL 0 dB

Initial setting is REAR LEVEL 0 dB

Let's you adjust the level of the rear (left and right) speakers.

* The level can be adjusted in 0.5 dB steps from -20.0 dB to +10.0 dB.

• Selecting MUTE completely mutes the sound (→) from the rear speakers. In this case, the sound of the rear channels is not output from the front speakers, etc.

(continued)

Initial setting is : TONE CONTROL OFF	Lets you turn the BASS and TREBLE tone control adjustments ON or OFF. You can use this setting to compare the sound of the BASS and TREBLE adjustments with that of the original signal.	Processor operations	Processor operations
The BASS and TREBLE tone control adjustments with that of the original signal.	<ul style="list-style-type: none"> • OFF flattens the frequency characteristics of all channels simultaneously. If you adjust the bass or treble levels after setting the tone control to OFF, the sound quality changes from the flat (0dB) position. • ON restores the frequency characteristics to the values present before the tone control was set to OFF. 	Processor operations	Processor operations
Bass level adjustment • Basic mode only*	Initial setting is : BASS 0 dB	Processor operations	Processor operations
Initial setting is : BASS 0 dB	Lets you adjust the level of the bass frequencies of the front (left and right), center, and rear (left and right) channels simultaneously. To adjust the LFE channel, see "Low Frequency Extension (LFE) mix level".	Processor operations	Processor operations
The level can be adjusted from 0% (no digital cinema sound effects) to 100% (150%) in 5% steps.	<ul style="list-style-type: none"> • The level can be adjusted in 0.5 dB in 0.5 dB steps. • The "0dB" setting represents line level (0 dB). 	Processor operations	Processor operations
Treble level adjustment • Basic mode only*	Initial setting is : TREBLE 0 dB	Processor operations	Processor operations
Initial setting is : TREBLE 0 dB	Lets you adjust the level of the treble frequencies of the front (left and right), center, and rear (left and right) channels simultaneously.	Processor operations	Processor operations
The level can be adjusted from 0% (no digital cinema sound effects) to 100% (150%) in 5% steps.	<ul style="list-style-type: none"> • The level can be adjusted in 0.5 dB in 0.5 dB steps. • The "0dB" setting represents line level (0 dB). 	Processor operations	Processor operations

Processor Operations

Menu mode selection

Initial setting : MENU MODE [BASIC]

Let you choose between the basic or the expand menu mode.

- The basic menu mode (BASIC) lets you make general adjustments to the sound fields and adjust the tone of all the speakers simultaneously.

- The expanded menu mode (EXPAND) lets you make press individual adjustments to the equalization and low cut frequency of the front, center, and rear speakers and determine the default settings for the digital inputs.

Note

If you switch from EXPAND mode to BASIC mode, the adjustments made in the EXPAND mode are retained. However, if you adjust parameters from the same menu in the BASIC mode, those settings change accordingly. For example, when you switch to the basic mode, the individual tone controls for each speaker in the EQUALIZER menu are preserved; however, a single adjustment to the generic tone controls in the SURROUND menu sets all speaker equalizations to the front speaker settings.

Even if you plan on making individual adjustments using the EQUALIZER menu,

We recommend that you start by using the tone controls in the basic menu mode and then make further refinements by switching to the expand mode and using the equalizer.

Digital input trim adjustment *Expand mode only*

Initial setting is : INPUT TRIM DB

Different components often have a different line levels. In such cases you can adjust the line level at each of the digital inputs. Settings are stored independently for each input.

Digital input mode *Expand mode only*

Initial setting is : DECODE MODE [AUTO]

Let you specify the type of signal to be input to the currently digital input jack (AC-3 RF or DIGITAL 1-4). Settings are stored independently for each input.

AUTO: The unit automatically switches between Dolby Digital AC-3 and PCM

* AC-3: All digital signals are treated as Dolby Digital (AC-3) signals. A PCM signal is input to a jack set to AC-3, no sound will be heard.

SP. SETUP menu

The speaker setup menu contains parameters that allow you to set the type and size of the speakers in your system. This information is essential for production of realistic surround sound. The settings available in this menu can also be accessed by pressing SET UP (see "Speaker Set Up" on page 8 for details).

Front speaker size

Initial setting is : FRONT SP [LARGE]

See Page 8

Center speaker size

Initial setting is : CENTER SP [LARGE]

See Page 8

Rear speaker size

Initial setting is : REAR SP [LARGE]

See Page 8

Rear speaker position

Initial setting is : REAR SP [S/D]

See Page 8

Sub woofe selection

Initial setting is : SW. WOOFER [YES]

See Page 8

Front speaker distance

Initial setting is : FRONT 5.0 meter//6 feet*

See Page 8

Center speaker distance

Initial setting is : CENTER 5.0 meter//15 feet*

See Page 8

Rear speaker distance

Initial setting is : REAR 5.5 meter//11 feet*

See Page 8

Front speaker roll off frequency *Expand mode only*

Initial setting is : FRONT SP > 120 Hz

This setting lets you select the roll off frequency for the low cut filter of the front (left and right) speakers. For details about the menu mode, see page 15.

For details about the distance unit parameter, see page 17.

Front speaker roll off frequency *Expand mode only*

Initial setting is : CENTER SP > 120 Hz

This setting lets you select the roll off frequency for the low cut filter of the center speaker. In order to prevent clipping, frequencies below the cut off frequency are not output from the front speakers.

Center speaker roll off frequency *Expand mode only*

Initial setting is : CENTER SP > 120 Hz

This setting lets you select the roll off frequency for the low cut filter of the center speaker. In order to prevent clipping, frequencies below the cut off frequency are not output from the center speaker.

Rear speaker roll off frequency *Expand mode only*

Initial setting is : REAR SP > 120 Hz

This setting lets you select the roll off frequency for the low cut filter of the rear (left and right) speakers. In order to prevent clipping, frequencies below the cut off frequency are divided by the Dolby Digital (A-C) bass reduction circuit and output from the sub woofer or other "LARGE" speakers. The bass frequencies lower than the cut off frequency are divided by the Dolby Digital (A-C) bass reduction circuit and output from the sub woofer or other "LARGE" speakers. In order to prevent clipping, frequencies below the cut off frequency are divided by the Dolby Digital (A-C) bass reduction circuit and output from the sub woofer or other "LARGE" speakers. In order to prevent clipping, frequencies below the cut off frequency are not output from the rear speakers.

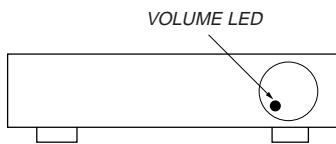

SECTION 3 TEST MODE

Self-Diagnosis and Test Mode

This unit is provided with a “self-diagnosis and self-recovery function” which detects DSP errors and automatically recovers the unit, and a test mode for performing operation checks during repairs.

1. Main Functions

- DSP self-diagnosis and self-recovery function
- Self-diagnosis for servicing and error message display
- Display of history of past DSP errors
- Various operation check mode
- SRAM, EEPROM check function
- Initialization (Differs according to country)

2. Entering the Test Mode

1. While pressing the [AC-3 RF] button and [DIGITAL 2] button simultaneously in the power OFF state, press the [POWER] button.
2. When the VOLUME LED starts blinking, release these buttons. The self-diagnosis for servicing will be executed, and the operation check mode will be set.
(NOTE: Performing initialization will erase the error history. Do not therefore press the wrong buttons. For details, refer to “5. Initialization” on page 14.)

3. Self-diagnosis Mode for Servicing/Display of History of DSP Errors

3-1. Self-diagnosis Mode for Servicing

Before entering the test mode, first the following self-diagnosis program for servicing will be run.

1. Checks if unintended buttons are being pressed
2. Checks EEPROM (External memory device) operation
3. Read/write test of DSP external memory (1M SRAM)
4. Checks and displays history of various DSP abnormal operations

• When an error is detected:

The error message is displayed for about 8 seconds on the fluorescent display tube, it is switched to “DOLBY SURROUND”, and the operation check mode is set. (See Table 1.)

When several errors occur at the same time, only the first error detected will be displayed.

• When no error is detected:

“software version X. XX” will be displayed, and the operation check mode will be set. (X. XX means its version No.)

Table-1:

Error Message/Fluorescent Display Tube	Possible Reasons
VOLUME LED blinks and fluorescent display tube is OFF*	An unintended button is pressed, or connection fault of flexible board between MAIN board and DISPLAY board.
EEPROM read error!	Soldering fault or malfunction between IC202 (MAIN board AT24C02) and IC201 (MAIN board microprocessor).
EEPROM write error!	Reached end of IC202 (MAIN board AT24C02) writing life or incorrect insertion of part.
S-RAM access error!	Soldering fault between IC422 (MAIN part 1M SRAM) and IC423 (MAIN board SSP424023)
DSP error detected!	When a DSP error is detected (Refer to “3-2. Display of History of Abnormal DSP Operations”).

*NOTE:

Refer to “6. Check of Pressing of Unintended Button” on page 14.

3-2. Display of History of DSP Operations

- When “DSP error detected!” is displayed on the fluorescent display tube, the history of DSP errors will be displayed eight seconds later. (See Fig. 1.)
- This history will be displayed if a DSP error has occurred in the past. It helps the detection of malfunction parts by enabling past problems of the unit to be checked.
- This history shows the “Cause of error” and “How many times occurred” for the two DSPs. (See Fig. 1.)

Fig. 1

Corresponding DSP	: 1st DSP (DSP56009)	2nd DSP (SSP424023)
Contents of fluorescent display tube	: [1 2 3 x 0 0 0 0 1 2 3 x 0 0 0 0]	
How to read the display	: ↑↑↑↑↑↑↑↑ ④③②① ④③②①	Number of times the error has occurred

How to read the display

- The left side shows the errors of the first DSP (DSP56009:MAIN board IC424) and the right side shows the errors of the second DSP (SSP424023:MAIN board IC423).
- The “How many times occurred” indicates the number of times that the error has occurred. If an error has occurred more than 256 times, it will be displayed as 256.
- The ① ② ③ ④ part shows 0 or 1 according to the cause of the error. If an error has occurred, 1 will be displayed. If no error has occurred, 0 will be displayed. (See Table-2.)

Table-2:

Cause of error	Possible cause
① Failed in initial booting	Mostly due to faulty connection (soldering) between DSP and microprocessor
② DSP does not operate	Faulty DSP clock (X401 and onwards), faulty DSP part, etc.
③ Communication port malfunction	OVERRUNNING of DSP due to heat, microprocessor bugging, or IC301 (MAIN board PLL) is faulty
④ No reply from DSP	Faulty DSP part, or faulty microprocessor part, etc.

NOTE: This history is memorized in the EEPROM until the unit is initialized. (Refer to “5. Initialization” on page 14.)

4. Operation Check Mode

- During the operation check mode, functions can be set by pressing the corresponding button. (See Table-3.)
- Each time a button is pressed, the corresponding function will be displayed for about 8 seconds.
- Buttons other than those displayed in Table-3 operate usually.

NOTE: Do not press the **[SET UP]** button during the operation check mode. As this button is provided with a special function for debugging, pressing it may impede the normal output of signals in the sub-woofer mode.

Table-3:

Button	Fluorescent Display Tube Display	Function
DIGITAL2	DIG-2 (L-SL, R-SR)	Outputs the Lch DIGITAL-2 input signal to the REAR Lch and the Rch to the REAR Rch.
DIGITAL3	DIG-3 (L-C, R-SW)	Outputs the Lch DIGITAL-3 input signal to the CENTER and the Rch only to the WOOFER.
DIGITAL4	DIG-4 (L, R-ALL)	Outputs the Lch DIGITAL-4 input signal to the FRONT Lch, REAR Lch, CENTER, and the Rch to the FRONT Rch, REAR Rch, and CENTER.
OFF	Whole fluorescent display tube lit check Each time the button is pressed, the fluorescent display tube lights up as follows. Lit totally → Lit partially 1 → Lit partially 2 → Lit totally....	

By pressing the **[MENU]** knob and displaying “<<< LEVEL ADJUST >>>”, and rotating the **[+/-]** knob to the right, the input signal selected at that time can be output to any Lch or Rch channel. (See Table-4.)

Table-4:

Fluorescent Display Tube Display	Output Destination of Input Signal
Exchange (L-SL, R-SR)	Outputs the FRONT Lch/Rch signal only to the REAR Lch/Rch.
Exchange (L-C, R-SW)	Outputs the FRONT Lch signal only to the REAR Lch, and FRONT Rch signal to the REAR Rch.
Exchange (NORMAL)	Outputs the FRONT Lch/Rch signal to the FRONT Lch/Rch, the REAR Lch/Rch signal to the REAR Lch/Rch, the CENTER signal to CENTER, and the WOOFER signal to WOOFER as usual.
Exchange (L, R-ALL)	Outputs the FRONT Lch signal to the FRONT Lch, REAR Lch, and CENTER, and the FRONT Rch signal to the FRONT Rch, the REAR Rch, WOOFER.

5. Initialization (Differs according to destination)

After executing the test mode, be sure to perform initialization.

- **AEP, E, MY, SP, CH models**

While pressing the **[AC-3 RF]** button and **[DIGITAL3]** buttons simultaneously, press the **[POWER]** button. When the VOLUME LED starts blinking, release the buttons. “initialized (J/SP/CE)” will be displayed on the fluorescent display tube, and all internal settings will be returned to the initial values.

- **US, CND models**

While pressing the **[AC-3 RF]** button and **[DIGITAL4]** buttons simultaneously, press the **[POWER]** button. When the VOLUME LED starts blinking, release the buttons. “initialized (U/CA)” will be displayed on the fluorescent display tube, and all internal settings will be returned to the initial values.

NOTE: As all histories of abnormal DSP operations will be erased, note down the contents of the history beforehand.

6. Check of Pressing of Unintended Button

- This check is always performed when the power is turned ON. Therefore when an error occurs, it can be known without setting the test mode because the VOLUME LED blinks and the fluorescent display tube stops displaying.
- When an unintended button is pressed during the test mode or initialization, the VOLUME LED also blinks, and the fluorescent display tube stops displaying, preventing no mode to be set.

7. Other Functions

In the personal use of the unit at home, if no sounds are produced due to DSP problems, the DSP will be rebooted automatically to attempt recovery. If no sounds are still produced after five retries, “Turn POWER SW off!” will be displayed on the fluorescent display tube. If this problem occurs, it indicates that the DSP is faulty or the user’s setting environment may be unsuitable. Refer to “3. Self-Diagnosis Mode for Servicing/Display of History of DSP Errors” on page 12 to identify the problems.

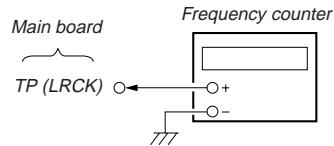

- **Abbreviation**

CND : Canadian model
MY : Malaysia model
SP : Singapore model
CH : Chinese model

SECTION 4 ELECTRICAL ADJUSTMENTS

PLL Free-running Adjustment

Connection :

Adjusting Method :

1. Connect the frequency counter to TP (LRCK).
2. Turn On the power switch.
3. Adjust RV301 of the main board so that the frequency of TP (LRCK) becomes the specified value.

Specified value: $44.5 \text{ kHz} \pm 0.5 \text{ kHz}$

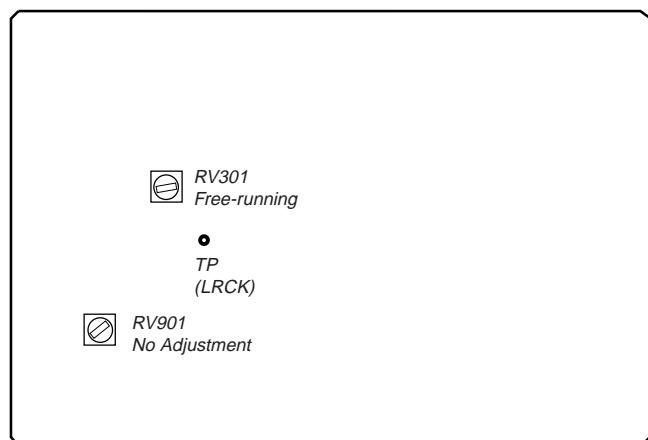

Adjusting point: Main Board

RV901 of Main Board

RV901 of the main board requires no adjustments. Please note that it should be fixed to mechanical center position when you moved and do not know origin position.

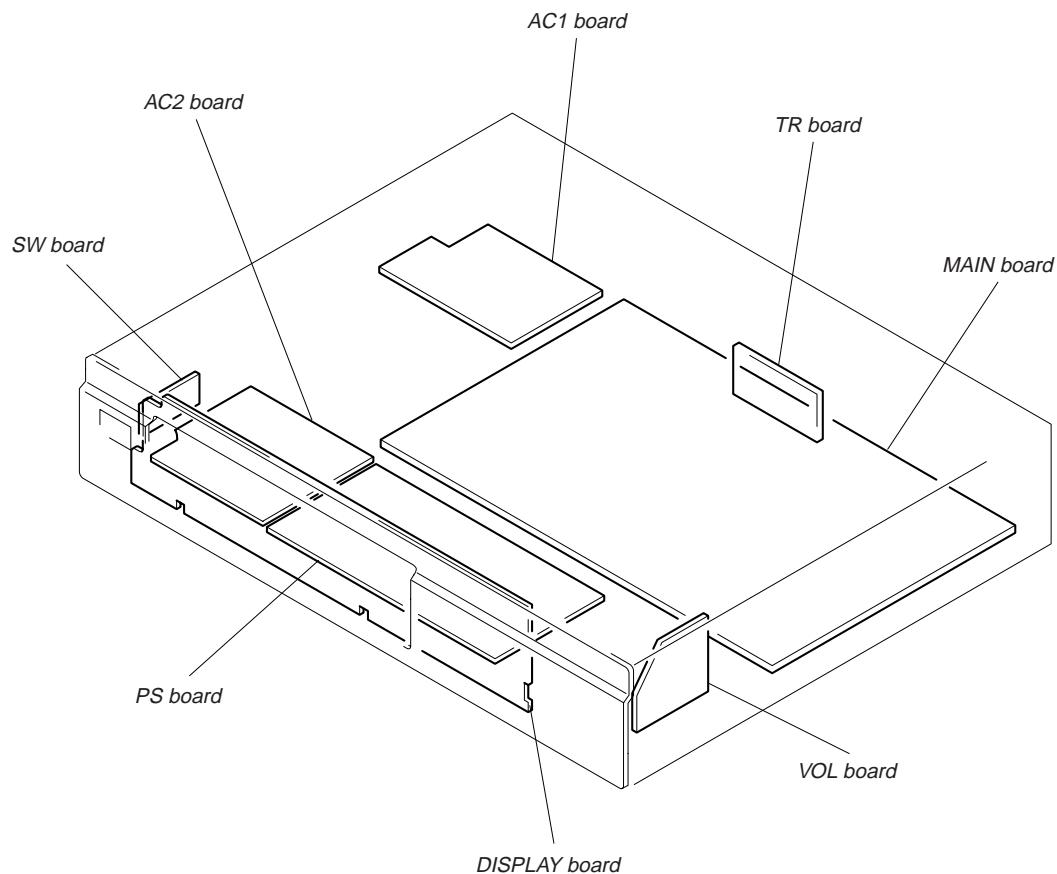

Adjustment Location :

[MAIN BOARD] — SIDE A —

15	XLAT	I	Microcomputer IF latch/chip enable input
16	SWDT	I	Microcomputer IF write data input
17	SRDT	O	Microcomputer IF read data output
18	DQSY	O	Microcomputer IF Sub-Q sync and ID sync output (Not used)
19	CKOUT	O	VCO clock output (Freerunning, 384fs, 512fs) (Not used)
20	FS128	O	128fs clock output
21	BCK	O	Bit clock output
22	LRCK	O	L/R clock output
23	DATAO	O	Audio data output
24	EROR	O	PLL lock error mute output

• IC401, 402, 403 Sampling Rate Converter (CXD8517Q)

Pin No.	Pin Name	I/O	Function
1	DATAI	I	Serial data input
2	LRCKI	I	Input serial data fs word clock input (Schmidt)
3	BCKI	I	Input serial data bit clock input
4	MI0	I	Input serial data format setting input 0
5	MI1	I	Input serial data format setting input 1
6	VDD	—	+5V power supply
7	FI128	I	Input data fs reference clock input (128fs)
8	MO0	I	Output data format setting input 0 (Fixed at “L”)
9	MO1	I	Output data format setting input 1 (Fixed at “H”)
10	INIT	I	Initializing input (Schmidt). “L” : Initializing, “H” : Normal operation
11	NC	—	Not used
12	GND	—	Ground
13	XI	I	Inverter input for oscillating the crystal oscillator (512fo master clock input)
14	XO	O	Inverter output for oscillating the crystal oscillator (Not used)
15	VDD	—	+5V power supply
16	XO2	O	Oscillation clock division output: 256fs (Not used)
17	GND	—	Ground
18	PASS	I	Input data through output mode setting input. “L” : Normal operation, “H” : Through (When through: Effective operation output only for deemphasis, attenuation) (Fixed at “L”)
19	FISO	I	FI128 clock input division ratio setting input (Fixed at “L”)
20	FIS1	I	FI128 clock input division ratio setting input (Fixed at “L”)
21	TEST	O	Test input 0 (Not used)
22	NC	—	Not used
23	NC	—	Not used
24	TEST1	I	Test input 1 (Fixed at “L”)
25	TEST2	I	Test input 2 (Fixed at “L”)
26	TEST3	I	Test input 3 (Fixed at “L”)
27	STA	O	fs conversion ratio measurement condition monitor output (Not used)
28	VDD	—	+5V power supply
29	NC	—	Not used
30	DATAO	O	Serial data output (fso output)
31	BCKO	I/O	Output serial data bit clock input/output
32	LRCKO	I/O	Output serial data fs word clock input/output
33	NC	—	Not used
34	NC	—	Not used
35	MUTE	I	Data output mute setting input. “L” : Mute, “H” : Normal operation Synchronized with LRCK (“0” data only for DATAO output) (Fixed at “H”)
36	DEMP	I	Deemphasis setting input. “L” : OFF, “H” : ON (Fixed at “L”)
37	FS1	I	Deemphasis setting output fso frequency selection input 1 (Fixed at “L”)
38	FS2	I	Deemphasis setting output fso frequency selection input 2 (Fixed at “L”)
39	GND	—	Ground
40	XLAT	I	Attenuation, mode setting data latch pulse input (Fixed at “H”)
41	SCK	I	Attenuation, mode setting clock input (Fixed at “H”)
42	SWDT	I	Attenuation, mode setting data input (Fixed at “H”)
43	SLAVE	I	Sync mode selection. “L” : Slave, “H” : Master (Fixed at “H”)
44	NC	—	Not used

• IC423 Digital Signal Processor (SSP424023)

Pin No.	Pin Name	I/O	Function
1	AGND	—	Address buffer ground
2	MCS0	O	Chip select 0 output to S-RAM (Not used)
3	MCS3	O	Chip select 3 output to S-RAM
4	MA14	O	Address data output to S-RAM
5	MA13	O	
6	AVCC	—	Address bus buffer power supply (+5V)
7	MA12	O	Address data output to S-RAM
8	AGND	—	Ground for address bus buffer
9	QVCC	—	Power supply for internal logic (+5V)
10	QGND	—	Ground for internal logic
11	MA11	O	Address data output to S-RAM
12	MA10	O	
13	MA9	O	
14	MA8	O	
15	AGND	—	Ground for address bus buffer
16	MA7	O	Address data output to S-RAM
17	AVCC	—	Power supply for address bus buffer (+5V)
18	MA6	O	Address data output to S-RAM
19	MA5	O	
20	MA4	O	
21	AGND	—	Ground for address bus buffer
22	MA3	O	Address data output to S-RAM
23	MA2	O	
24	MA1	O	
25	MA0	O	
26	SCK	I	SPI serial clock signal input from system controller
27	EXTAL	I	External frequency input (3 MHz)
28	QVCC	—	Power supply for internal logic (+5V)
29	QGND	—	Ground for internal logic
30	PINIT	I	PLL initialize input (Fixed at "L")
31	PGND	—	Ground for PLL
32	PCAP	I	PLL filter input (Connected to 0.01 µF capacitor)
33	PVCC	—	Power supply for PLL (+5V)
34	SGND	—	Ground for serial port
35	MISO	I	Master data signal input from system controller
36	RESET	I	Reset signal input from system controller
37	MODA	I	Mode select A (Fixed at "H")
38	MODB	I	Mode select B (Fixed at "L")
39	MODC	I	Mode select C (Fixed at "H")
40	SVCC	—	Power supply for serial port (+5V)

Pin No.	Pin Name	I/O	Function
41	MOSI	O	Master data signal output to system controller
42	SS	I	SPI slave select signal input from system controller
43	HREQ	I	Host request signal input from system controller
44	SGND	—	Ground for serial port
45	SDO2	O	Audio serial data 2 signal output
46	SDO1	O	Audio serial data 1 signal output
47	SDO0	O	Audio serial data 0 signal output
48	SVCC	—	Power supply for serial port (+5V)
49	SCKT	O	Serial clock transmission
50	WST	O	Word select transmission
51	SCKR	I	Serial clock reception
52	QGND	—	Ground for internal logic
53	QVCC	—	Power supply for internal logic (+5V)
54	SGND	—	Ground for serial port
55	WSR	I	Word select reception
56	SDI1	I	Audio serial data 1 signal input
57	SDI0	I	Audio serial data 0 signal input
58	DSO	O	Debug serial signal output (Not used)
59	DSI	I	Debug serial signal input (Not used)
60	DSCK	I	Debug serial clock signal input (Not used)
61	DR	I	Debug request input (Fixed at "H")
62	MD7	I/O	Data input/output with S-RAM
63	MD6	I/O	
64	MD5	I/O	
65	MD4	I/O	
66	DGND	—	Ground for data bus buffer
67	MD3	I/O	Data input/output with S-RAM
68	MD2	I/O	
69	MD1	I/O	
70	DVCC	—	Power supply for data bus buffer (+5V)
71	MD0	I/O	Data input/output with S-RAM
72	DGND	—	Ground for data bus buffer
73	GPIO3	I/O	General DSP input/output (Not used)
74	GPIO2	I/O	
75	GPIO1	I/O	
76	GPIO0	I/O	General DSP input/output with system controller
77	MRD	O	Write strobe signal output to S-RAM
78	MWR	O	Read strobe signal output to S-RAM
79	MRAS	O	Low address strobe signal output to S-RAM
80	MCAS	O	Column address strobe signal output to S-RAM

• IC424 Digital Signal Processor (DSP56009)

Pin No.	Pin Name	I/O	Function
1	AGND	—	Address buffer ground
2	MCS0	O	Chip select 0 output to S-RAM (Not used)
3	MCS3	O	Chip select 3 output to S-RAM (Not used)
4	MA14	O	Address data output to S-RAM (Not used)
5	MA13	O	
6	AVCC	—	Address bus buffer power supply (+5V)
7	MA12	O	Address data output to S-RAM(Not used)
8	AGND	—	Ground for address bus buffer
9	QVCC	—	Power supply for internal logic (+5V)
10	QGND	—	Ground for internal logic
11	MA11	O	
12	MA10	O	
13	MA9	O	
14	MA8	O	
15	AGND	—	Ground for address bus buffer
16	MA7	O	Address data output to S-RAM (Not used)
17	AVCC	—	Power supply for address bus buffer (+5V)
18	MA6	O	
19	MA5	O	
20	MA4	O	
21	AGND	—	Ground for address bus buffer
22	MA3	O	
23	MA2	O	
24	MA1	O	
25	MA0	O	
26	SCK	I	SPI serial clock signal input from system controller
27	EXTAL	I	External frequency input (3 MHz)
28	QVCC	—	Power supply for internal logic (+5V)
29	QGND	—	Ground for internal logic
30	PINIT	I	PLL initialize input (Fixed at "L")
31	PGND	—	Ground for PLL
32	PCAP	I	PLL filter input (Connected to 0.01 µF capacitor)
33	PVCC	—	Power supply for PLL (+5V)
34	SGND	—	Ground for serial port
35	MISO	I	Master data signal input from system controller
36	RESET	I	Reset signal input from system controller
37	MODA	I	Mode select A (Fixed at "H")
38	MODB	I	Mode select B (Fixed at "L")
39	MODC	I	Mode select C (Fixed at "H")
40	SVCC	—	Power supply for serial port (+5V)

Pin No.	Pin Name	I/O	Function
41	MOSI	O	Master data signal output to system controller
42	SS	I	SPI slave select signal input from system controller
43	HREQ	I	Host request signal input from system controller
44	SGND	—	Ground for serial port
45	SDO2	O	Audio serial data 2 signal output (Not used)
46	SDO1	O	Audio serial data 1 signal output
47	SDO0	O	Audio serial data 0 signal output
48	SVCC	—	Power supply for serial port (+5V)
49	SCKT	O	Serial clock transmission
50	WST	O	Word select transmission
51	SCKR	I	Serial clock reception
52	QGND	—	Ground for internal logic
53	QVCC	—	Power supply for internal logic (+5V)
54	SGND	—	Ground for serial port
55	WSR	I	Word select reception
56	SDI1	I	Audio serial data 1 signal input
57	SDI0	I	Audio serial data 0 signal input
58	DSO	O	Debug serial signal output (Not used)
59	DSI	I	Debug serial signal input (Not used)
60	DSCK	I	Debug serial clock signal input (Not used)
61	DR	I	Debug request input (Fixed at “H”)
62	MD7	I/O	Data input/output with S-RAM (Not used)
63	MD6	I/O	
64	MD5	I/O	
65	MD4	I/O	
66	DGND	—	Ground for data bus buffer
67	MD3	I/O	Data input/output with S-RAM (Not used)
68	MD2	I/O	
69	MD1	I/O	
70	DVCC	—	Power supply for data bus buffer (+5V)
71	MD0	I/O	Data input/output with S-RAM (Not used)
72	DGND	—	Ground for data bus buffer
73	GPIO3	I/O	General DSP input/output (Not used)
74	GPIO2	I/O	
75	GPIO1	I/O	
76	GPIO0	I/O	
77	MRD	O	Write strobe signal output to S-RAM (Not used)
78	MWR	O	Read strobe signal output to S-RAM (Not used)
79	MRAS	O	Low address strobe signal output to S-RAM (Not used)
80	MCAS	O	Column address strobe signal output to S-RAM (Not used)

• IC901 Digital Signal Processor (AC-3 RF Demodulator) (PD4606A)

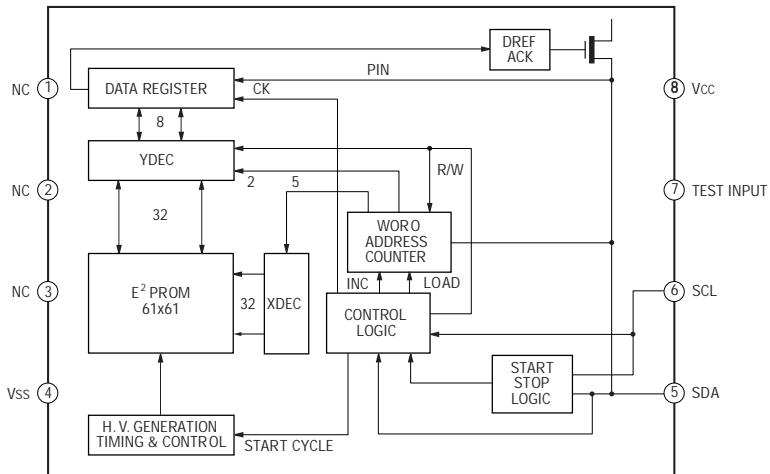

Pin No.	Pin Name	I/O	Function
1	GND	—	Ground
2	VDD	—	Power supply (+5V)
3	XOUT	O	Crystal oscillation circuit output (Not used)
4	XIN	I	Crystal oscillation circuit input (46.08 MHz)
5	TM0	I	
6	TM1	I	For IC test mode setting (Fixed at “L”)
7	TM2	I	
8	RESET	I	System reset. Reset at “L”. Set to “L” when power is turned ON
9	DATA	I	Serial data input from CPU (LSB first) (Fixed at “H”)
10	MCK	I	CPU serial input clock Latches data at rising edge of clock (Fixed at “H”)
11	MLTB	I	CPU input latch Latches serial data (8 bits) from CPU at register (Fixed at “H”)
12	TM3	I	For IC test mode setting (Fixed at “L”)
13	TM4	I	
14	TLDB	I	Tag code load signal Tag code is loaded in 16-bit shift register at “L” (Fixed at “H”)
15	TCK	I	Tag code output clock Data is output at rising edge of clock (Fixed at “H”)
16	TDO	O	Tag code serial data signal. (MSB first) (Not used)
17	TRP	O	Tag code renewal signal. “H” when no error in tag code when error correction operation of one block ends (Not used)
18	TM5	I	For IC test mode setting (Fixed at “L”)
19	TSTIN1	I	For testing IC (Fixed at “L”)
20	TSTIN2	I	
21	A0	O	Address output to external RAM. Address 0 (LSB)
22	A1	O	Address output to external RAM. Address 1
23	A2	O	Address output to external RAM. Address 2
24	A3	O	Address output to external RAM. Address 3
25	VDD	—	Power supply (+5V)
26	A4	O	Address output to external RAM. Address 4
27	A5	O	Address output to external RAM. Address 5
28	GND	—	Ground
29	VDD	—	Power supply (+5V)
30	A6	O	Address output to external RAM. Address 6
31	A7	O	Address output to external RAM. Address 7
32	GND	—	Ground
33	A12	O	Address output to external RAM. Address 12
34	A14	O	Address output to external RAM. Address 14 (MSB)
35	WE	O	Write enable signal to external RAM. Active at “L”

Pin No.	Pin Name	I/O	Function
36	A13	O	Address output to external RAM. Address 13
37	A8	O	Address output to external RAM. Address 8
38	A9	O	Address output to external RAM. Address 9
39	A11	O	Address output to external RAM. Address 11
40	GND	—	Ground
41	OE	O	Output enable signal to external RAM. Active at “L”
42	A10	O	Address output to external RAM. Address 10
43	DBP	I/O	Data terminal with external RAM. For erasure pointer
44	DB7	I/O	Data terminal with external RAM. Data bus 7
45	DB6	I/O	Data terminal with external RAM. Data bus 6
46	DB5	I/O	Data terminal with external RAM. Data bus 5
47	DB4	I/O	Data terminal with external RAM. Data bus 4
48	DB3	I/O	Data terminal with external RAM. Data bus 3
49	DB2	I/O	Data terminal with external RAM. Data bus 2
50	DB1	I/O	Data terminal with external RAM. Data bus 1
51	DB0	I/O	Data terminal with external RAM. Data bus 0
52	VDD	—	Power supply (+5V)
53	GND	—	Ground
54	VO	O	VCXO output (Not used)
55	VI	I	VCXO input
56	TSTIN3	I	For testing IC (Fixed at “L”)
57	PDO	O	Phase comparator output (3-state)
58	MSYC	O	“H” when AC-3 sync signal. For monitor (Not used)
59	MUTO	O	Muting output. Muting at “H” “H” when “MUTI=H” or not synchronized with AC-3
60	VLDY	O	Parity flag output. Data is correct when “L”. Data may be incorrect if “H” (Not used)
61	LRCK	O	L/Rch switching clock. 48 kHz. Lch when “H” (Not used)
62	BCK	O	Bit clock. 3.072 MHz (Not used)
63	SDO	O	Serial data output (Not used)
64	DASYO	O	Digital out preamble B identification signal (Not used)
65	DAOUT	O	Digital output
66	DAIN	I	Digital audio interface signal input Select a digital output processed inside IC by internal register setting or signal from “DAIN” and output to “DAOUT” (Not used)
67	TSTIN4	I	For testing IC (Not used)
68	TSTIN5	I	
69	C2F1	O	C2 error correction state display. Outputs if corrected properly (Not used)
70	C2F0	O	C2 error correction state display. Outputs number of errors at C2 (Fixed at “H”)
71	C1F1	O	C1 error correction state display. Outputs whether error is present at C1 (Fixed at “H”)
72	C1F0	O	C1 error correction state display. Outputs number of errors at C1 (Fixed at “H”)
73	DRY	O	For monitoring error correction (Not used)
74	DEN	O	
75	ECCK	O	Error correction sector clock. 576 kHz (Not used)

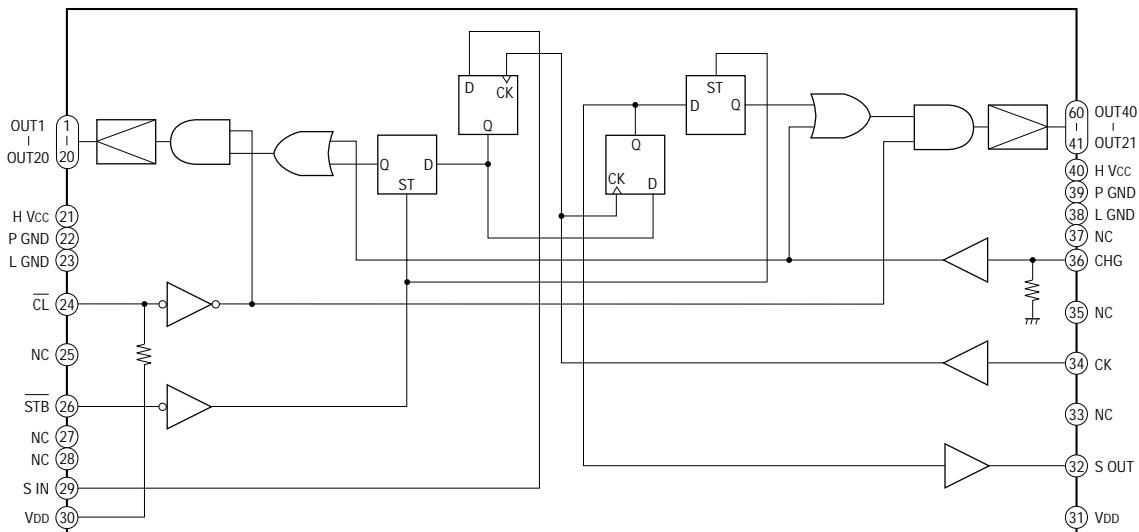

Pin No.	Pin Name	I/O	Function
76	TSTIN6	I	For testing IC (Fixed at “L”)
77	TSTIN7	I	
78	MUTI	I	Muting input. Muted at “H”
79	VDD	—	Power supply (+5V)
80	GND	—	Ground
81	DOUT	O	QPSK inverted output (Not used)
82	DIN	I	QPSK signal input
83	XSEL	I	Crystal select. Used at “H” (Fixed at “H”)
84	PSEL	I	PLL select. Used at “L” (Fixed at “L”)
85	EPCK	O	QPSK eye pattern clock. 288 kHz (Not used)
86	EYEI	O	Eye pattern output. I phase (Not used)
87	EYEQ	O	Eye pattern output. Q phase (Not used)
88	BTR	O	
89	ELB	O	Not used
90	C9M	O	9.216 MHz (Not used)
91	TSTIN8	I	For testing IC (Not used)
92	GND	—	Ground
93	IDST	O	Signal indicating ID start position (Not used)
94	IDCK	O	ID signal sample clock Data changes at falling edge of clock. 576 kHz (Not used)
95	IDO	O	ID data output (MSB first) (Not used)
96	WINGT	O	“L” while searching for sync signal of correction block (Not used)
97	SYST0	O	
98	SYST1	O	Displays lock state of sync signal of correction block (Not used)
99	ADST0	O	
100	ADST1	O	Displays continuous state of ID address of correction block (Not used)

SECTION 6 EXPLODED VIEWS

NOTE:

- -XX, -X mean standardized parts, so they may have some difference from the original one.
- Items marked “*” are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Color Indication of Appearance Parts Example:
KNOB, BALANCE (RED)
 ↓
 Cabinets color

- The mechanical parts with no reference number in the exploded views are not supplied.
- Hardware (# mark) list and accessories and packing materials are given in the last of this parts list.
- Abbreviation

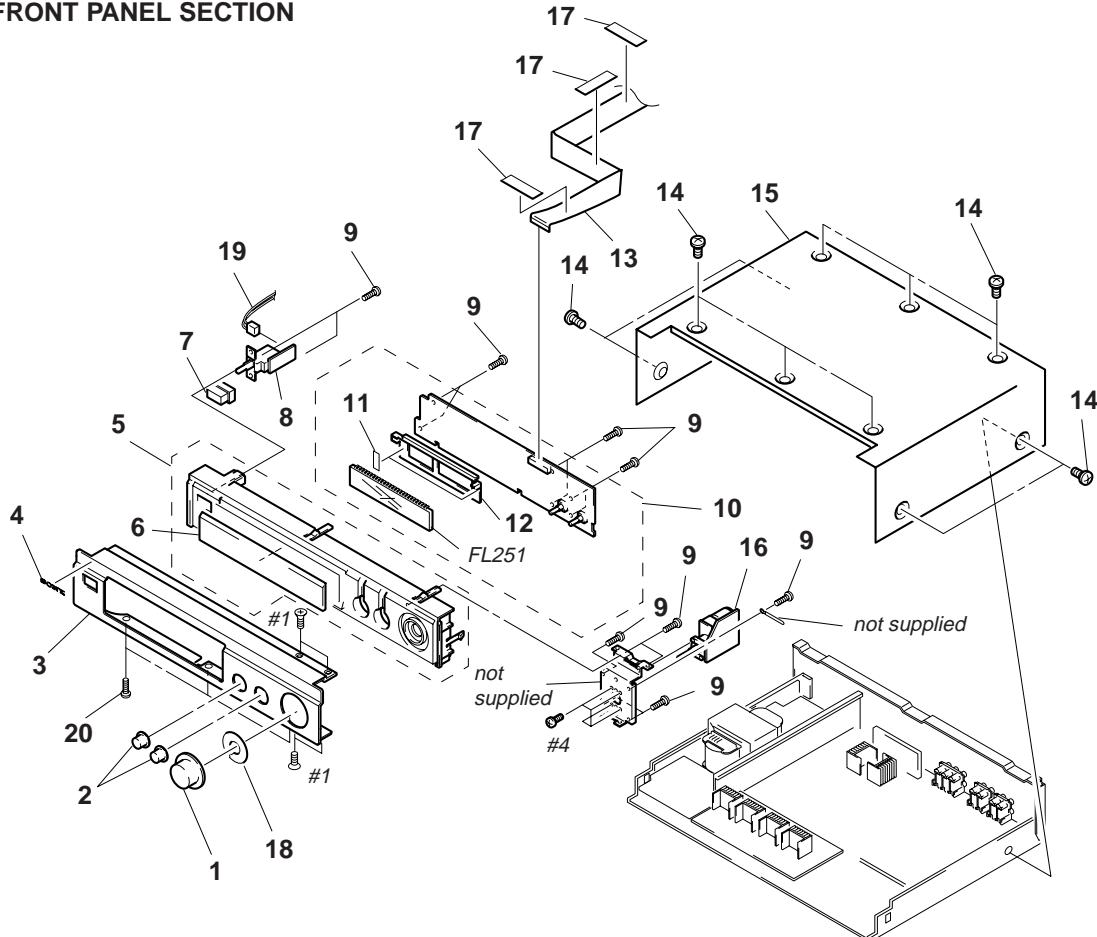

CND : Canadian model
MY : Malaysia model
SP : Singapore model
CH : Chinese model

The components identified by mark ▲ or dotted line with mark ▲ are critical for safety.

Replace only with part number specified.

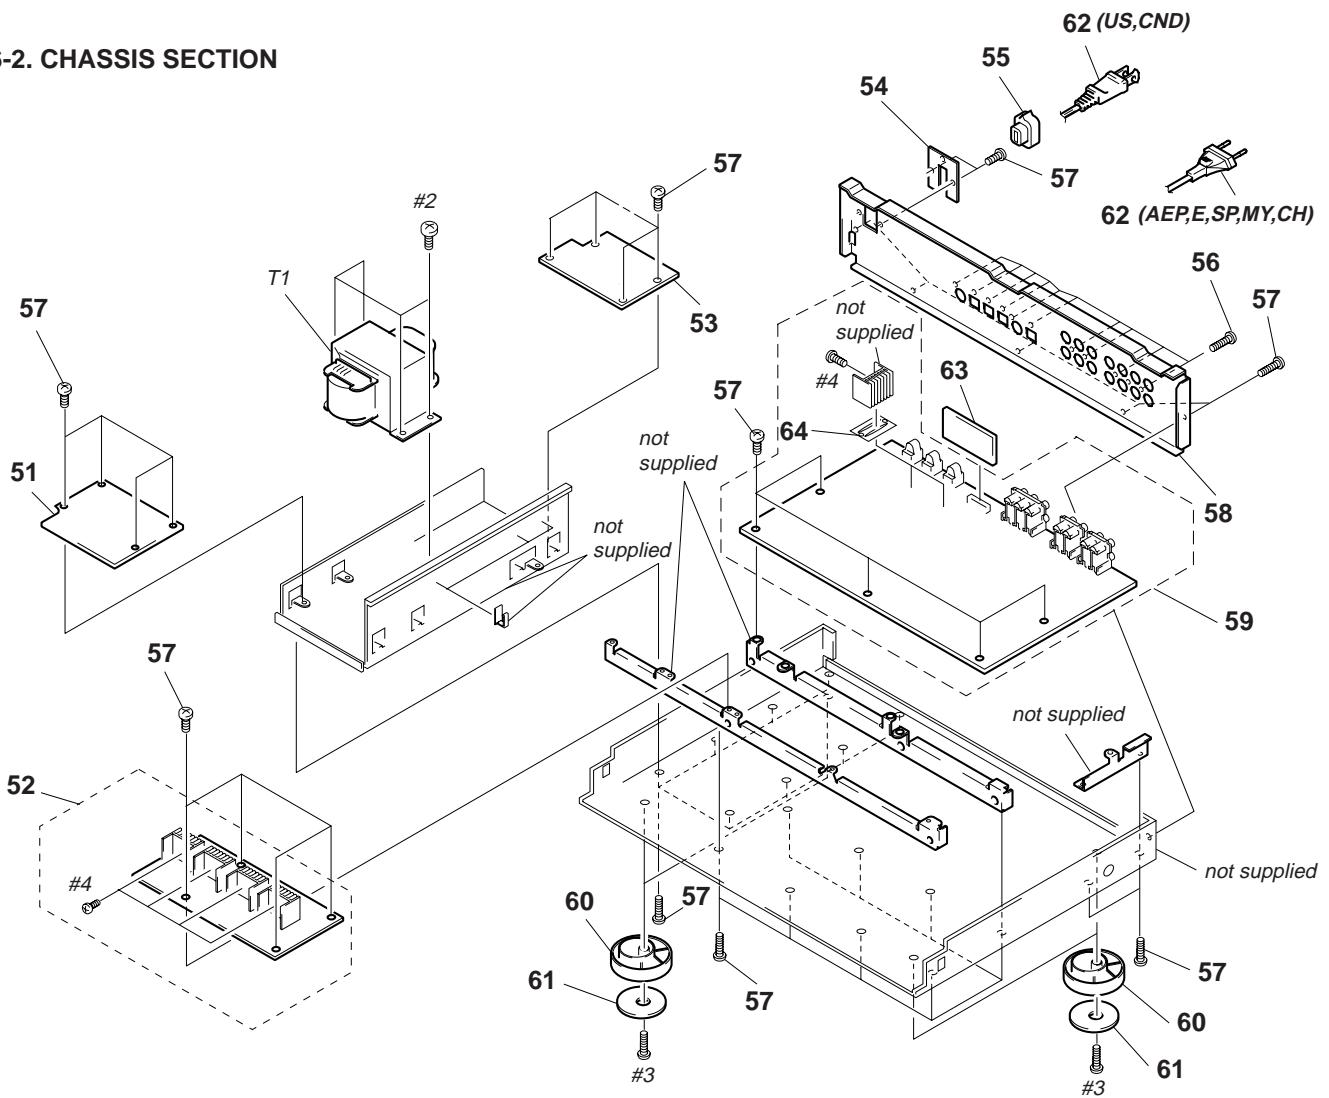

Les composants identifiés par une marque ▲ sont critiques pour la sécurité.
 Ne les remplacer que par une pièce portant le numéro spécifié.

Ne les remplacer que par une pièce portant le numéro spécifié.

When indicating parts by reference number, please include the board name.

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- -XX, -X mean standardized parts, so they may have some difference from the original one.
- Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- RESISTORS
All resistors are in ohms
METAL: Metal-film resistor
METAL OXIDE: Metal Oxide-film resistor
F : nonflammable

- SEMICONDUCTORS
In each case, u: μ , for example:
uA...: μ A..., uPA...: μ PA..., uPB...: μ PB...,
uPC...: μ PC..., uPD...: μ PD...
- CAPACITORS
uF : μ F
- COILS
uH : μ H
- Abbreviation
CND : Canadian model
MY : Malaysia model
SP : Singapore model
CH : Chinese model

2. AC1 BOARD CHANGED

For units with serial numbers 800001 to 801500, always disconnect the power plug from the outlet before beginning repairs, because repairs performed with the power plug connected and the power switch off may lead to electrical hazards.
 This problem has been solved for units with serial numbers 901500 onwards by changing boards.
 The following are the units which have been changed their boards.

- POWER SECTION -

Location: A-D, 1-9

[AC1 BOARD]
