# Pioneer LaserDisc Player Control - Using a Mac

Pioneer does not offer a driver to control a LaserDisc player from a Macintosh Computer. This is because a driver is not needed. The basic controls of the LaserDisc player, ie., play, stop, scan, etc., are on the remote control and the front control panel of the player.

To create a multimedia presentation that will be demonstrated using a LaserDisc player controlled by a Mac, it will be necessary to use a third party software package. The list below are companies that offer software authoring system packages that may be used to create a complete multimedia presentation.

Panda Software	603.646.2716
MACROMEDIA	800.945.4061
Discovery Systems International	615.690.8829
Guarantee Software	509.467.4577
PIERIAN Spring Software	800.472.8578
Roger Wagner Publishing	800.421.6526
