

Ordering EPROM Upgrades for the LD-V8000

The LD-V8000 contains two EPROMS (Erasable Programmable ROM chips). These EPROMs are re-programmed periodically to fix bugs or to add features and generally improve the functioning of the player. Customers who wish to keep up with running changes to the LD-V8000 EPROMs or who want to take advantage of new features can order the LD-V8000 EPROM Upgrade Kit (Part #LDV8EP92.)

The LD-V8000 EPROM Upgrade Kit is available through Pioneer Parts Department in Long Beach, CA. Customers can order the kit and charge the fee to their credit card or account number by calling the appropriate number:

Pioneer Parts and Service (End Users)	1-800-228-7221
Pioneer Parts and Service (Dealers)	1-800-457-2881

The LD-V8000 EPROM Upgrade Kit contains the two EPROMs (IC 9 & IC 10) and is packaged with **Technical Bulletin #144**, explaining how to remove the old EPROMs and install the new ones.

It is strongly recommended, however, that the EPROM replacement procedures be performed by a Pioneer Authorized Service Technician.

Call 1-800-872-4159 for the nearest Pioneer Authorized Service Center.

If you decide to replace these EPROMs yourself, you run the risk of voiding your player's warranty.
