

CD/CDV/LD PLAYER

CDV-W901

SERVICE MANUAL

IMPORTANT NOTICE

This manual has been provided for the use of authorized YAMAHA Retailers and their service personnel. It has been assumed that basic service procedures inherent to the industry, and more specifically YAMAHA Products, are already known and understood by the users, and have therefore not been restated.

WARNING: Failure to follow appropriate service and safety procedures when servicing this product may result in personal injury, destruction of expensive components, and failure of the product to perform as specified. For these reasons, we advise all YAMAHA product owners that any service required should be performed by an authorized YAMAHA Retailer or the appointed service representative.

IMPORTANT: The presentation or sale of this manual to any individual or firm does not constitute authorization, certification or recognition of any applicable technical capabilities, or establish a principle-agent relationship of any form.

The data provided is believed to be accurate and applicable to the unit(s) indicated on the cover. The research, engineering, and service departments of YAMAHA are continually striving to improve YAMAHA products. Modifications are, therefore, inevitable and specifications are subject to change without notice or obligation to retrofit. Should any discrepancy appear to exist, please contact the distributor's Service Division.

WARNING: Static discharges can destroy expensive components. Discharge any static electricity your body may have accumulated by grounding yourself to the ground buss in the unit (heavy gauge black wires connect to this buss).

IMPORTANT: Turn the unit OFF during disassembly and part replacement. Recheck all work before you apply power to the unit.

■ TO SERVICE PERSONNEL

Critical Components Information.

Components having special characteristics are marked and must be replaced with parts having specifications equal to those originally installed.

CAUTION: USE OF CONTROLS OR ADJUSTMENTS OR PERFORMANCE OF PROCEDURES OTHER THAN THOSE SPECIFIED HEREIN MAY RESULT IN HAZARDOUS RADIATION EXPOSURE.

THE COMPACT DISC PLAYER SHOULD NOT BE ADJUSTED OR REPAIRED BY ANYONE EXCEPT PROPERLY QUALIFIED SERVICE PERSONNEL.

PROTECTION OF EYES FROM LASER BEAM DURING SERVICING

This set employs a laser. Therefore, be sure to carefully follow the instructions below when servicing.

1. Laser Diode Properties

- Material : GaAlAs
- Wavelength : 780 nm
- Emission Duration : Continuous
- Laser Output : max. 44.6 μ W*

* This output is the value measured at a distance of about 200 mm from the objective lens surface on the Optical Pick-up Block.

2. When checking the laser diode emission, keep your eyes more than 30 cm away from the objective lens.

CLD-D604

1. DISASSEMBLY

1.1 REMOVING THE TRAY UNIT

1. Press the LD-OPEN/CLOSE button to set the tray unit to its OPEN position.
 - * When manually setting the tray unit to its OPEN position, refer to 1.2 and 1.3.
2. Pull out the tray unit while pressing the hook (A) (Fig.1-1), located on the rear right and left side of the tray unit, to the each inner side.

Fig. 1-1 Tray unit

1.2 MANUALLY SETTING THE TRAY UNIT TO ITS OPEN POSITION

1. Remove the clamber unit (B) (Fig. 1-2) by loosening its four screws.

Fig. 1-2 Structure of set

2. Make sure that the position of the lens in the carriage assembly is such that the lens stops outside the position indicated by the dotted line in Fig. 1-1.

When the lens stops inside the dotted line, slowly turn the worm (Q) portion of the carriage assembly (Fig. 1-3) to move the lens in the carriage assembly until the lens is outside the position indicated by the dotted line in Fig.1-1. Perform it using the belly of a finger not to damage the worm by the nail.

Note that by not going through this process, opening the CD tray and removing the tray ASS'Y would be more time-consuming.

Fig. 1-3 Carriage assembly

3. Insert your hand through the bottom left side of the tray unit and turn the gear pulley (C) (Fig. 1-4) in a clockwise direction until the servo-mechanism unit (D) (Fig. 1-5) lowers. Keep turning the pulley until the tray unit starts to move towards the front.

Fig. 1-4 Loading mechanism assembly

4. Slowly pull out the tray unit to the OPEN position.

Fig. 1-5 Mechanism Section Disassembly Diagram

1.3 SETTING THE TRAY UNIT TO ITS OPEN POSITION WHEN THE CD TRAY IS COMPLETELY OR PARTIALLY OPEN

1. Remove the clamber unit **B** (Fig. 1-2) by loosening its four screws.
2. Slowly push in the CD tray to the CLOSE position.
3. Slowly turn the worm **Q** portion of the carriage assembly (Fig. 1-3) to move the lens in the pickup assembly until the lens is outside the position indicated by the dotted line in Fig. 1-1.
4. Insert your hand through the bottom left side of the tray unit and turn the gear pulley **C** (Fig. 1-4) in a counterclockwise direction until the servo-mechanism unit **D** (Fig. 1-5) starts to move upward. Keep turning the pulley until the clamp position is reached.
5. When the clamp position has been reached, turn the gear pulley **C** (Fig. 1-4) in a clockwise direction until the servo-mechanism unit **D** lowers. Keep turning the pulley until the tray unit starts to move towards the front.
6. Slowly pull out the tray unit to the OPEN position.

1.4 REMOVING THE SERVO-MECHANISM UNIT

1. Remove the clamber unit **B** (Fig. 1-2) by loosening its four screws, and remove the tray unit.
2. Remove the three connectors **I** to **L** (Fig. 1-2). Remove the earth lead by loosening its screw.
3. Remove the four fixing screws **N** (Fig. 1-4) of the mechanism base and remove the whole servo-mechanism unit from its casing.
4. Remove the mechanism base side of the CDP spring **O** (Fig. 1-5), loosen the CD plate's two screws, remove the CD plate **E** while bending the mechanism base.

5. Remove the two lead wire connectors from LMSB assembly at the bottom of the mechanism base **R**.
6. Remove the lead wires from the hook **S** (Fig. 1-6) for the FG signal lead (yellow) wire and the carriage position detecting SW lead wire (blue) at the front of the mechanism base **R**.
7. Remove the lead wires from the hook **S** for the spindle motor lead wire (green, white), the FG signal lead wire (yellow), the carriage position detecting SW lead wire (blue) and the earth lead wire (black) at the center of the mechanism base **R** (Fig. 1-6).
8. While pushing the cam plate **F** (Fig. 1-7) towards the direction of the arrow **D**, turn the twin gear **H** (Fig. 1-7) in a counterclockwise direction.
9. Stop turning the twin gear **H** (Fig. 1-7) when the servo-mechanism unit **D** (Fig. 1-5) has gone upward and the tilt cam **T** is engaged with the cam gear **G** by three to five teeth. (Place in the same position when attaching the servo-mechanism unit.)
10. While bending the clamp cam hook **X** (Fig. 1-5) in the direction of the arrow **Z**, move the hook to its "built-in position" **W** (Fig. 1-5) towards the rear.
11. Lift the servo-mechanism unit **D** straight up and remove the unit from the clamp cam (Fig. 1-5).

1.5 ATTACHING THE TRAY UNIT

1. Make sure that the CD plate **E** is positioned to the right (LD Tray mode) as in Fig. 1-7. When the CD plate **E** is positioned to the left (CD Tray mode) as in Fig. 1-7, perform steps 1) to 2).
- 1) Turn the power ON. Press the LD OPEN/CLOSE button while pushing cam plate **F** (Fig. 1-7) towards the direction of the arrow **D**.
- 2) Wait until the cam gear **G** (Fig. 1-7) turns, the servo-mechanism unit **D** (Fig. 1-5) goes upward, and the carriage assembly stops moving.

Fig. 1-6 Mechanism base the bottom side

Fig. 1-7 Loading mechanism section

2. Press the LD OPEN/CLOSE button to open the tray unit, or pull out the power cord from the AC outlet and turn the twin gear ④ (Fig. 1-4) in a clockwise direction until the cam gear ⑤ (Fig. 1-5) can no longer turn.
3. Keeping the tray unit parallel with the front panel, slowly insert the tray unit through the opening of the front panel. The hook of the rear on both sides are locked in the hook of the mechanism base side at the same time. Note that if you insert the tray unit in the front panel when the tray unit and the front panel are not parallel with each other, the tray unit might get stuck while being inserted.

1.6 ATTACHING THE SERVO-MECHANISM UNIT

1. Return the clamp cam and other parts to their original positions (when the servo-mechanism unit was removed).
2. While turning the tilt cam ① in a counterclockwise direction by three to five teeth (Fig. 1-8) in the same manner as when the tilt cam was removed, attach the servo-mechanism unit from above to the clamp cam (Fig. 1-5). Insert the lead wires to the bottom side through the opening the center of the mechanism base.
3. While bending the clamp cam hook ② in the direction of the arrow ②, move the hook in the direction of the arrow ③ (Fig. 1-5).

Fig. 1-8 Tilt mechanism section

4. Turn the twin gear ④ (Fig. 1-8) in a clockwise direction until the servo-mechanism unit lowers, the cam gear ⑤ (Fig. 1-8) stops turning, and twin gear ④ (Fig. 1-8) runs idle.
5. Hook the lead wire for the spindle motor (green, white), the lead wire for the FG signal (yellow), the lead wire for the carriage position detecting SW (blue) and the earth lead wire (black) to the hook ⑥ (Fig. 1-6) on the bottom center of the mechanism base.
6. Hook the yellow and green wires to the hook ⑦ (Fig. 1-6) on the front bottom side of the mechanism base. And attach the lead wire to the each same color connector on the LMSB assembly.

Fig. 1-9 Attach the cam gear

1.7 ATTACHING THE CAM GEAR AND CAM PLATE

1. Bring the clamp cam (Fig. 1-5) close towards you (while the servo-mechanism unit is being lowered).
2. Insert the cam gear ⑤ upon directing the rib of the cam gear to the arrow mark of the mechanism base as shown in Fig. 1-9.

3. Turn the cam gear ③ in a counterclockwise direction until the start portion of the cam gear becomes horizontal (Fig. 1-10).
4. Attach the CAS spring ④ (Fig. 1-10) to the cam plate ⑤ and hook the ⑥ side of the CAS spring to the hook of the mechanism base, and move the boss on the bottom center of the cam plate to the left side of the cam gear horizontal portion, attach the cam plate.
5. Fix the shaft holder ① using three screws (Fig. 1-5).

Fig. 1-10 Attach the cam plate

1.8 MATCHING THE POSITION OF THE GEARS

1. Attach the center gear ⑨, twin gears ⑩ and ⑪ in the positions indicated in Fig. 1-11.

Fig. 1-11 Attach the gears

1.9 ATTACHING THE CD PLATE

1. Upon attaching the CDP spring ⑦ (Fig. 1-5) to the CD plate ⑧, attach the CD plate ⑧ (from the right side) into the position shown in Fig. 1-7
2. Fasten the CD plate by two screws.
3. Hook the free side of the CDP spring to the hook of the mechanism base.

1.10 NOTE CONCERNING CARRIAGE ASSY EXCHANGE

The carriage ASSY does not come with a flexible cable (VDA 1464) and a CA hook (VNL1641).

2. DESCRIPTION OF MECHANISM SYSTEM

2.1 OUTLINE OF MECHANISM

As shown in Fig. 2-1, the general structure of the mechanism is made up of the following five units ;

1. Clamper unit
2. Tray unit
3. Servo mechanism unit
4. Clamp cam unit
5. Loading mechanism unit

The feature of the mechanism system is that the mechanism action is completed by mounting the servo mechanism unit and the tray unit to the loading unit. The action of mechanism is roughly divided into ;

1. Tray (LD tray or CD tray) action
2. Disc clamping action
3. Tilt servo action

These actions are carried out by the driving force of the loading motor.

Fig. 2-1 Outline of Mechanism

2.2 STRUCTURE AND OUTLINE OF TRAYS

The feature of this equipment is adoption of a particular tray structure; the CD tray section is mounted inside the LD tray section. This enables open/close action of only the CD tray. In the LD mode, the LD and CD trays act as one body so that the operability of both the LD and CD trays can be improved. Fig. 2-2 shows the structure of the tray unit.

The changeover of tray action is made by the Lock plate assembled in the LD tray. In the CD mode, the Lock plate is made open so only the CD tray moves before and after. The structure is so designed that two trays are coupled with the Lock plate and move together in the LD mode.

Fig. 2-2 Structure of Tray unit

Fig. 2-3 CD Tray unit

Fig. 2-4 Selection of LD tray & CD tray

Fig. 2-5 Open/Close of Tray

2.3 ACTION OF TRAY UNIT

The tray unit of this equipment may act in two ways ; the LD and CD trays act as one body in the LD mode ; and only the CD tray performs open/close action in the CD mode.

The changeover between the two modes of tray action is made depending on whether or not the Lock plate assembled in the LD tray locks the CD tray. (refer to Fig. 2-2, Fig. 2-3)

2.4 SELECTION BETWEEN LD TRAY AND CD TRAY

The tray selecting mechanism is shown in Fig. 2-4. When the player is stopped, the mechanism is placed in the clamping state. When the CD OPEN/CLOSE button is pressed with the player stopped, the carriage ass'y to which the pickup is installed will move to the inside circumference of CD. The mechanism is put in the unclamping action and the Clamp cam will move forward. As the Clamp cam advances, the CD plate moves right until it is struck against the carriage ass'y. Then, the tray select pin of the CD plate is fit in the CD tray select groove and the CD plate is pulled back to left. Thus, the CD plate locks the LD tray and unlocks the CD tray with the Lock plate being turned left.

In this way, if the carriage ass'y having the pickup is placed in the CD inside position, the LD tray is locked and the CD tray is released. Whereas, if the carriage ass'y is placed in the LD inner position, the CD tray is locked by the Lock plate assembled in the LD tray so the LD and CD trays will move together.

2.5 TRAY OPEN/CLOSE ACTION

The drive system of Loading mechanism is shown in Fig. 2-5. The driving force from the Loading motor is transmitted to the Twin gears via the gear pulley, the double gears 1 and 2 and the center gear. The Twin gears mesh with the Rack gear located under the CD tray. The tray open/close action is carried out by the driving force thus transmitted, At this time, the Cam gear is not rotated, because the section that is not toothed faces to the Twin gears. Besides, since the stroke of the CD tray Rack gear is insufficient, making up for the stroke is done by the Twin gears.

Fig. 2-6 Operation of LD tray open

Fig. 2-7 Operation of CD tray open

The strokes for the LD and CD trays are as follows ;

- Stroke for moving LD tray : 270mm
- Stroke for moving CD tray : 225mm

Position detection when the tray is opened is shown in Fig. 2-6 and Fig. 2-7. The Cam plate upper boss is engaged with the cam part of the CD tray when the LD tray is activated for opening. As the LD tray moves in direction (2) shown in Fig. 2-6, the boss arrives to the end of the cam and the cam is detached from the boss. At this time, the open detection boss existing in the LD tray is put against the left side of the Cam plate and advances further. When the LD tray open detecting boss is disengaged from the left side of the Cam plate, the Cam plate slides left by means of a spring in the direction as shown by (3). When the Cam plate slides left, SW2 shown in Fig. 2-8 is turned OFF and the opening of the tray is detected, which causes the loading motor to stop.

The detection of the CD tray opening is shown in Fig. 2-7. When the CD tray starts to move in the opening direction, the Cam plate upper boss slides on the cam part of the tray. When the tray is opened, the Cam plate moves left at the end of the cam of the CD tray. Then, as in the case of the LD tray, the tray opening is detected and the Loading motor stops.

Fig. 2-8 Detection of Mechanism position

2.6 CHANGEOVER BETWEEN LOADING AND CLAMPING ACTIONS

In the loading action, the tray is driven by the Twin gears, The cam part at the bottom of the CD tray and the Cam plate upper boss get into gear so the tray will be put in place.

When the tray has been put in place, the Cam plate is pushed right by the CD tray cam and starts the sliding motion. As the Cam plate slides right, the lower pin of the Cam plate causes the Cam gear to turn clockwise, so that the Cam gear will engage with the Twin gears to drive the Cam gear (refer to Fig. 2-9).

The rotation of the Cam gear starts the clamping action. Meanwhile, the sequence of the motion is completely reversed when the tray is opened from the unclamped state. When the Cam gear turns counterclockwise and the servo mechanism goes down, the Cam plate slides left by means of a spring. The CD tray is pushed forward by the Cam plate upper boss and the CD tray cam. At this time, the Cam gear is disengaged from the Twin gears and the Rack gear part of the CD tray engages with the Twin gears to open the tray.

2.7 CLAMPING ACTION

Clamping action is started by rotation of the Cam gear caused by engagement of the Cam gear and the Twin gears, which results from the sliding motion of the Cam plate pushed at the end of loading. When the Cam gear is rotated, the boss at the lower part of the Cam gear causes the Clamp cam to move backward (refer to Fig. 2-10).

The structure is so designed that the cam at the lower part of the Cam gear can fit in section A of the Clamp cam to hold the clamping state.

Thus, the Clamp cam moves backward, so that the servo mechanism unit installed on both side cams goes up and clamps a disc.

4.2 INTERFACE BETWEEN MICROCOMPUTERS

This unit has an 8-bit microcomputer (IC101: PD0212B) that controls the mechanism and an 8-bit microcomputer (IC201: PD3302A) that controls operation/display. These two

microcomputers are connected by serial interface. This communication line also uses a character generator IC (IC603: PD9004A).

Fig. 4-2 Serial interface connection

4.3 COMMUNICATION PROCEDURE BETWEEN MICROCOMPUTERS

1. PD0212B sets SHAKE pin (23 pin) to several μ s "L" and requests PD3302A for commencement of communications.
 2. Upon receiving request for commencement of communications, PD3302A sets SHAKE pin (27 pin) to "L" and informs PD0212B that communication is possible.
 3. PD0212B switches SCK1 (21 pin), which it has been using as an input port, into output mode. PD3302A puts XSCCK (3 pin) into input mode and establishes communications line connection between microcomputers.
 4. PD0212B sends out transmission clock (562.5kHz) at 8-bits and transmits each datum in synchronization with that clock.
 5. When PD3302A receives 8-bit data, it sets SHAKE pin (27 pin) to "H" and signals that one communication has ended.
 6. PD0212B puts SCK1 (21pin) into input mode and PD3302A puts XSCCK (3 pin) into output mode and cuts off the communication line to complete one communication.
- Communication is in 10-30ms cycles and 16-byte data can be transmitted at one time.
 - Handshake is done on one line and PD0212B and PD3302A use ports that are for both input and output. Output mode is in effect only when output is "L". At other times, input mode (high impedance) is in effect. Also, before output of "L", each confirms that SHAKE is "H" before carrying out operation. This prevents crosstalk of outputs.
 - To prevent transmission error when communicating data, a check code has been added. When transmission error has been detected 16 times continuously, PD3302A outputs a reset signal to PD0212B in order to return to the initial condition. Similar resetting is also done when communication of 300ms or more cannot be carried out.

Fig. 4-3 Microcomputer-to-Microcomputer Timing Chart

4.4 OUTLINE OF MECHANISM CONTROL SYSTEM

1) Processing after power ON

After the power is turned on, reset is canceled (28 pin : L → H) and the mechanism control microcomputer (PD0212B) carries out initialization in the following order.

1. Inside RAM and ports are initialized
2. FTS - audio IC (IC802 : LC78681KE) is initialized
3. Tray position is detected
4. Communication with mode control microcomputer (PD3302A) is confirmed (If there is any abnormalities in communication, the following initialization steps are not carried out.)
5. TBC IC (IC500 : PD0192A) is initialized
6. Pickup position is initialized
7. Disc revolution is stopped
8. Loading mode is initialized

Normal operations are commenced after the above initialization procedures are completed.

2) Loading/tilt motor control

Loading/tilt motor drive is controlled by PWM signal output from the TILT DRV (24pin) of the CONT section mechanism control IC(IC101) which goes through the OP amp (IC803). The voltage impressed on the loading/tilt motor is switched by the PWM signal duty as shown below. The PWM cycle is 30msec.

Motor operation		Duty (%)	PWM Signal waveform
Focus OFF	Stop	0	5.0V 2.5V 0V
	Loading	80	
	Unloading	Is changed to prevent feeling/overrun. refer to Fig. 4-4-2.	
Focus ON	Large error	Tilt UP servo	
		Tilt DOWN servo	33
	Small error	Tilt UP servo	13
		Tilt DOWN servo	20

Fig. 4-4-1

Fig. 4-4-2 Duty Changes at Unloading

● Loading/clamping operation

When the tray is opened or closed and the disc is clamped or stopped, the motor operates while detecting the position of the cam gear with the loading/tilt position detection switch which is connected to SW1 - 3 of IC101 (33-35pin).

● Tilt servo operation

Each time disc movement starts, the loading/tilt motor can be used for playing LD discs and CDV discs (video part) because of the tilt servo.

When the tilt servo is operating, the drive of the loading/tilt motor is PWM drive.

The tilt servo drives the loading/tilt motor so that the input voltage of TILT ERR of IC101 (6pin) is 2.5V.

The ON/OFF conditions for the tilt servo are as shown below.

When there is an abnormality in the disc or the tilt sensor circuit and input voltage of the TILT ERR pin does not enter the set range even if the pick up incline is more than +1.7 or -2.2 degrees, the mecha switch condition is detected and the loading motor's operation is stopped. The tilt servo switches the PWM duty between two steps according to the error value. When the error value is small (0.84V-4.35V), the duty is small and when the error value is large (0V-0.84V, 4.35V-5V), the duty is large for PWM output. refer to Fig. 4-4-3.

Disc part	Disc movement started	At normal play
LD	ON	CAV 12" : OFF when frame number is more 48000 8" : OFF when frame number is more 20000 CLV 12" : OFF when rotation is below 776rpm at inner → outer movement OFF when rotation is below 794rpm at outer → inner movement 8" : OFF when rotation is below 1199rpm at inner → outer movement OFF when rotation is below 1244rpm at outer → inner movement
CD,CDV audio part	ON	OFF
CDV video part	ON	0:00 - outer track 2:00 (disc with 3:00 or more recording) ON

Table 1 : Tilt Servo ON/OFF Conditions

Fig. 4-4-3 Loading/Tilt Position

3) Slider Motor Control

Slider motor drive is controlled by PWM signal output from the SLD DRV pin 18 of the MOTHER ASS'Y CONT section mechanism control IC (IC101) which goes through the OP amp (IC803). The voltage impressed on the slider motor is switched by the PWM signal duty as shown below. The PWM cycle is approximately 910μsec.

Fig. 4-4-4 Switching of Voltage Impressed on Slider Motor

The slider servo controls the slider motor so that the input voltage of the SLD ERR pin (8pin) of the mechanism control IC is the same as the voltage at STOP.

Fig. 4-4-5 Slider Position

4) Audio Control

XANA	SQ1	SQ2	Lch Line Out	Rch Line Out
L	L	L	Analog L channel	Analog R channel
	H	H	Mute	Mute
H	Following commands from microcomputer, LC78681KE carries out switching between 3 conditions.		Digital L channel Digital L channel Digital R channel	Digital R channel Digital L channel Digital R channel

Fig. 4-4-6

At time of CD scan and LD clear scan (in case of digital sound selection), - 12dB attenuated sound is output.

5) Clear Scan

Through scanning with DISPLAY ON, clear scanning without screen distortion can be carried out.

At time of clear scan, scan is carried out while outputting digital sound at - 12dB (same as CD scan). (sound cannot be output when analog sound is selected.) The operation principles are given below.

1. In the clear scan mode, a prescribed number of tracks can be skipped with multi-track jumping.
2. In order to match phases of REF system and SG system, the mechanism control IC (PD0212B) sends a shift enable command to the DVP IC (PD0192A) and waits until the phases match (VLOCK="H").
3. Upon receiving the shift enable command, the DVP IC first eliminates phase difference between REF - H and SG - H by either decreasing or increasing SG - H at 6 clock increments. When there is no difference between H phases, the DVP IC eliminates phase difference between REF - V and SG - V by decreasing or increasing SG - V by 7H increments. When there is no phase difference, VLOCK is set to "H".
4. When VLOCK of the mechanism control IC becomes "H", squelch is canceled and the disc picture is shown for a fixed time. Step 1 is again returned to and steps 1 to 4 are repeated.

- * For sections where disc picture is not output, a black background is displayed.
- * During clear scan, the played digital sound is output in section where disc picture is output and in section that has VLOCK.
- * REF - H, V ... H - SYNC, V - SYNC of standard video signal
- * SG - H, V ... H - SYNC, V - SYNC generated by sync generator in DVP interior
- * VLOCK ... Signal that is emitted when H, V phases of REF system and SG system match.

Fig. 4-4-7

●Clear Scan Timing Chart

CAV

Fig. 4-4-8

- * SHIFTEN.XVSQ is serial command sent to DVP
- * The audio mute signal is put on at the same time as video squelch, but its cancellation is earlier than video squelch.

- ① : Video squelch is put on.
- ② : Multi-track jump $32 \times 2 \times 3$ is carried out.
- ③ : CLOCK, H decrease or increase is carried out to match phases of REF system and SG system. Shift enable (SHIFT EN) is ON.
- ④ : Since phases match (VLOCK="H")
- ⑤ : Video squelch is canceled and play is carried out for fixed time.

CLV : Compared with CAV, the time until phases are matched after jumping is long.

Fig. 4-4-9

6) Normal State Scan

CAV : Synchronization with play back V SYNC and multi-track jumping is carried out.

Fig. 4-4-10

CLV : FG is counted and multi-track jumping is carried out every four revolutions of inner track, three revolutions of middle track, and two revolutions of outer track.

Fig. 4-4-11

Fig. 4-4-12

7) Outline mode

The mode control microcomputer (PD3302A) stores the location and by starting with pressing the "LAST MEMORY" button twice the slider compulsory feed and few seconds play are repeated from the start of the disc (from the start of side B if the STOP mode is entered when side B is in the PLAY mode) up to about 3 minutes before the target, then finally after the address 5 seconds before the target is searched, the system shifts to normal play mode.

At the start of few seconds play, the digital audio is gradually raised and at the end the digital audio is gradually lowered.

(When analog audio is selected, this operation is not carried out and there is only sound during the few seconds play.)

Summary of operations

1. When the system goes into outline mode, the mechanism control microcomputer (PD0212B) issues the VSQ ON command to the DVP IC (PD0192A).
2. The slider is compulsory moved (31.4% duty) to the outer edge for a fixed period of time (controlled by the mode controller: about 160 msec).
During the compulsory movement of the slider to the outer edge, the tracking is OFF.
The slider is stopped and the procedure advances to Step 3.
3. The slider is set in servo move and the tracking is ON.
4. The system waits until TBCLOCK (Pin 56) goes high.
5. The mechanism controller IC issues the shift enable command to the DVP IC to align the REF and SG phases.
6. The system waits 300 msec.
As the DVP IC specification, since REFLOCK (Pin 48) stabilizes within a maximum of 300 msec, the system waits this maximum period so that the VSQ end timing is not compressed.
7. The system waits until REFLOCK goes high. Normally it goes high while the system is waiting the 300 msec.
8. The tracking is set to closed mode and the VSQ OFF command is issued to the DVP IC.
9. Play for about 1800 msec
10. Return to step1 until the slider reaches 3 minutes before the target.
11. The system searches for the address 10 seconds before the target, then returns to normal play.

Fig. 4-4-13

4.5 FLOW CHART OF EACH OPERATION

1) From Tray Open to Tray-In Flow Chart

From tray open state to completion of tray-in.

If loading operation is not finished within 10 seconds, the situation is judged as abnormal and the tray is opened.

Pick up position $R \approx 65\text{mm}$ when LD FOCUS operation
R: Distance from spindle center.

When there is a disc and focus does not lock even after three focus sweeps, the situation is judged as abnormal and the tray is opened.

Fig. 4-5-1

Fig. 4-5-3

2) LD Set-up Flow Chart

During movement to spindle start position, if the focus is cannot be achieved, it is determined that there are overlapping LD, CD and the tray is opened.

Fig. 4-5-4

If the rotation rate is greater than 2100 rpm, the disk is judged to be a mirror surface disc and rotation stopped.

CDV-W901

Fig. 4-5-6

3) CD Set Up Flow Chart

When pick up is sent to CD inside, since the slider motor is PWM driven, speed is slowed.

Fig. 4-5-7

• If subcodes can not be read for 4 seconds after (C) spindle acceleration, the spindle is allowed to run free for 120 ms to slow rotation and make withdrawal easier.

• CD-R partial disc means that, during CD-R writing, memory of program area is completed with no TOC memory.

4.6 TABLE OF OPERATION MODES

(1) Mecha mode = 1 open mode

Mecha step	Description
0	open entry, disc status clear
1	move slider to home position
2	spindle check
3	wait for slider movement
4	loading to unload
5	wait for loading motor operation finish
6	100ms timer set
7	wait for timer
8	loading to open
9	mecha mode all end

(2) Mecha mode = 2 standby mode

Mecha step	Description
0	stop entry, disc status clear
1	move slider to home position
2	spindle check
3	wait for slider movement
4	set loading mode to standby or vertical movement
5	wait for loading motor operation finish
6	mecha mode all end

(3) Mecha mode = 3 stop mode

Mecha step	Description
0	stop entry, disc status clear
1	move slider to home position
2	spindle check
3	wait for slider movement
4	power off check
5	wait for loading motor clamp finish
6	mecha mode all end

(4) Mecha mode = 4 disc sense mode

Mecha Step	Description
0	if B-side, to step F if CD or CDV, to step 4
1	LD EQ setting, CAV setting, slider target setting
2	wait for slider movement (LD sense position)
3	wait for focus lock, when locked, confirm LD and go to mecha mode all end
4	wait for focus OFF
5	LD fix or if B-side go to step B, CD EQ setting, slider target setting
6	wait for slider movement (CD sense position)
7	wait for focus lock, when locked, confirm CD and go to mecha mode all end
8	wait for focus OFF
9	LD EQ setting, CAV setting, slider target setting
A	wait for slider movement (LD sense position)
B	if there is no CD direct, go to step E
C	wait for focus lock, when locked, confirm LD and go to mecha mode all end
D	wait for focus OFF
E	set to no disc and go to mecha mode all end
F	slider target setting, if single is confirmed, go to step 13
10	wait for slider movement (B side inside position)
11	wait for focus lock, when locked, confirm LD and go to mecha mode all end
12	wait for focus OFF
13	set to no disc and go to mecha mode all end

(5) Mecha mode = 5 set up mode

Mecha Step	Description
0	slider target setting
1	wait for slider movement (TOC position)
2	spindle start
3	wait for spindle lock, check for LD misclamp also carried out
4	fix PRD or mislock
5	with LD if in read in, read out area, go to step 6 anything else go to step 7
6	after moving slider to program area, go to step 5
7	play mode entry

(6) Mecha mode = 6 TOC read mode

Mecha Step	Description
0	TOC entry
1	read in search (slider REV sending)
2	program area search (16-track forward jump)
3	read in search (4-track REV jump)
4	wait for program area with play, 100ms timer set
5	reading 1st time TNO address
6	wait for spindle lock
7	jump back to lead-in
8	if TOC cannot be read, treat as LD without TOC and go to mecha mode all end
9	1st time initialize to 0 15 second timer setting
A	wait for TOC reading with read in if readable, end if program area, go to next
B	if subcode is readable, 32-track REV jump
C	if subcode is readable, 32-track REV jump
D	if subcode is readable, 32-track REV jump
E	if subcode is readable, 32-track REV jump
F	return to step A
10	set PRD flag, start movement to program area
11	movement play to program area, 15 second timer setting
12	REV jump from TNO = 0 to IX = 0 generate code error and end

(7) Mecha mode = 7 play mode

Mecha Step	Description
0	play mode entry

(8) Mecha mode = 8 search mode

Mecha Step	Description
0	search mode entry
1	area change (A/V change)
2	area change wait timer setting
3	wait for area change
4	TOC check & TOC data setting
5	track count search entry
6	wait for track count search
7	wait on Tracking Open
8	wait for spindle sweep
9	zig-zag search (high speed)
A	zig-zag search (low speed)
B	wait on Tracking Close
C	send 256 Track SLDR (search outside CD TOC buffers)
D	wait for end of 256 Track SLDR send
E	wait on Tracking Open
F	32-track continuous jumping
10	wait for end of 32-track continuous jumping
11	16-track continuous jumping
12	wait for end of 16-track continuous jumping
13	1-track continuous jumping
14	wait for end of 1-track continuous jumping
15	32-track jumping
16	16-track jumping
17	4-track jumping
18	jump until right before target
19	play until target
1A	search error processing
1B	restart at time of target change during search

(9) Mecha mode = 9 side A → B mode

Mecha Step	Description
0	STOP mode entry
1	side change check and disc status clear
2	direct-B mode set
3	check end wait
4	tilt wait
5	carry target set
6	turn SW check & tilt neutral set
7	tilt neutral set & timer check
8	tilt wait
9	carry target set
A	SLDR assist end check
B	10 second timer setting
C	wait that the spindle reaches side B
D	assist end job

(10) Mecha mode = A side B → A mode

Mecha Step	Description
0	STOP mode entry
1	side change check and disc status clear
2	tilt wait
3	carry target set
4	turn SW check & tilt down set
5	tilt down wait & timer check
6	tilt wait
7	carry target set
8	SLDR assist end check
9	tilt neutral set
A	loading motor move to clamp wait
B	10 second timer setting
C	wait that the spindle reaches side A
D	assist end job

(11) Mecha mode = E power off mode

Mecha Step	Description
0	stop entry, disc status clear
1	move slider to home position
2	spindle check
3	wait for slider movement
4	power off check
5	wait for loading motor clamp end
6	mecha mode all end

(12) Mecha mode = F recover mode

Mecha Step	Description
0	recover entry
1	spindle hold
2	wait for spindle lock
3	spindle stop
4	spindle stop
5	wait for spindle lock end
6	turn slider movement direction
7	timer setting
8	wait for timer & focus lock check
9	wait for timer & slider movement
A	wait for spindle lock
B	recover error
C	CD/CDV recover mode
D	wait for spindle lock
E	recover error

5. SERVOS FOR FOCS, TRKG, SLDR

5.1 FOCS SERVO SYSTEM

The focus servo's operation initiation command is sent to the DSP IC (LC78681KE) by serial data from the mecha control IC. When the DSP IC receives the command, first the FTS section C987 charge is discharged by FST signal and the object lens is lowered. Next, by a FOCS signal, it is recharged and is gradually pulled up. When focus is achieved, *FZD goes down. When this signal is received, the FOCS signal is reset and the focus servo goes on. (refer to Fig. 5-1-3 and Fig. 5-1-4) (The focus loop SW is in the PAC 003A EQ section.) The operation initiation is the same as

before, but as a condition, FSUM is not used. Even the XFOK signal that goes to the mecha control IC establishes a time constant for the signal created by the FSUM in the PAC 002A interior and outputs it.

There is no large difference with the former FOCS servo system, but the EQ composition has changed and the FOCS does not carry out loop switching in response to DEFECT. refer to Fig. 5-1-1 and 5-1-2 for EQ section (only TRKG system) and SW logic.

FOCS SUM is composed by the AMP in the PAC002A interior and due to the addition of the AGC circuit, the former SUM LEVEL adjustment VR has been eliminated.

Fig. 5-1-4 FOCS Timing Chart When No Disc is Present

Fig. 5-1-5. FOCS SERVO BLOCK DIAGRAM

Fig. 5-1-6. FOCS SERVO TIMING CHART

5.2 TRKG SERVO DESCRIPTION

●Signal Flow

A and C output from the OEIC of the PICKUP ASSY is input into 23pin and 24pin of PAC002A and passes through the built-in TRKG error amp and is output through 22pin. PAC002A ATB (AUTO TRKG BALANCE) circuit detection and TRKG offset detection are also carried out. The TRKG error signal that is output from 22pin is input to 7pin of PAC 003A after being gain adjusted by VR603. It then goes through the EQ section and is output from 16pin. In the EQ section, for optimal trackability, interior SW are switched by the logic section signal that is composed of LD/CD, THLD, TGL, TOFF, and DEF signals. The EQ section and logic circuit are shown in Fig. 5-2-2 and 5-2-3.

●One Track Jump and Multi-Track Jump

The timing chart for each pin output signal of IC 901 (PAC 003A) at time of One track jump and multi-track jump is shown. (Fig. 5-2-1) One track jump is the same as in the former model (used PA3003), but in the case of multi-track jump, the timing for turning TRKG servo ON is not by frequency detection. Instead it is by track count detection. In other words, for 32-track jump, the old model would output 16-track portion accel and after that it would be indefinite. In this model, however, the accel outputs 18-track portion and the brake outputs 14-track portion.

Fig. 5-2-1 Timing Chart for Each Pin Output Signal

5.3 SLIDER MOTOR CONTROL

●Signal Flow

The tracking drive signal that is output through 1pin of drive IC902 (TA8410AK) passes through LPF, is amplified by IC 903 (BA4560F). After it is subject to a level shift by the 2.5 V center, it is input to IC101 (mecha control IC) 8pin and makes SLDR ERR signal. The slider motor drive pulse that responds to that signal's level is output from 18pin and after being power amplified by drive IC803 (LA6510), it drives the slider motor.

When the pick up position is forcibly moved at time of disc determination/start, in response to slider position signal that is input to 9pin of IC101, operation is carried out while position is being detected.

Fig. 5-2-2 TRKG EQ Section Circuit Diagram

Fig. 5-2-3 TRKG EQ Control Logic Circuit Diagram

Fig. 5-2-4 TRKG and SLDR SERVO BLOCK DIAGRAM

6. VIDEO SIGNAL PROCESSING SYSTEM DESCRIPTION

6.1 RF SYSTEM

The RF signals from the pickup are amplified by the RF amp and after RF correction processing are passed through a high pass filter. Then the main line system passes through an audio carrier trap and low pass filter and is input to Pin 27 of PAC005B. The drop out RF is input to Pin 29 of PAC005B.

6.2 MAIN LINE VIDEO SYSTEM

The RF signal input to Pin 27 of PAC005B is detected and output from Pin 25. Then it passes through a low pass filter and the video level adjustment VR and is input to Pin 22.

There it passes through the inversion amp and deemphasis circuit and becomes a normal video signal (about 1Vp-p with sync tip 100% white).

The main line video signal is not output from Pin 21 but is subject to noise reduction within the IC and is output from Pin 14. Then it passes through a low pass filter, is input from Pin 12, passes through a clamp circuit and amp, is output from Pin 10, is input to Pin 46 of PD0192A, and is converted to digital data by an A/D converter. Then TBC correction is applied within PD0192A and drop outs are compensated for. Moreover, characters are inserted and 8-bit digital video signals at pins 9 to 16 are output to a 3-line digital comb filter (CXD2023Q).

6.3 DROP OUT SYSTEM

The RF signals input to Pin 29 of PAC005B have their level and frequency sensed. The drop out pulse is output from Pin 1 and dropouts are compensated for within PD0192A.

6.4 SYNC SEP. SYSTEM

The video signals input from Pin 12 of PAC005B are clamped, then passes through an amp and low pass filter, and clamped again to extract the SYNC signals.

6.5 DATA SEP. SYSTEM

The video signals input from Pin 12 of PAC005B are clamped, then passed through an amp and a low pass filter and the data is extracted. As conditions at this time, the disc rotation rate must be at least nearly normal (when DOS frequency sensing is not applied), the SYNC must be extracted, and V-SYNC must be appearing normally.

7. TBC SYSTEM DESCRIPTION

7.1 DIGITAL VIDEO PROCESSOR (PD0192A)

Time axis correction (spindle control, TBC) and video signal processing are performed by PD0192A. This IC changes some of the functions of PD0146A. The main functions of PD0192A are :

- Horizontal, vertical SYNC signal separation
- Acceleration control signal creation
- Spindle error signal creation
- Spindle driver I/F
- Digital TBC
- Color drop out compensation
- SSG (SYNC signal generator)
- Blue background generation and squelch switching
- Character insertion
- Analog audio jitter removal signal creation

7.2 SPINDLE CONTROL

The spindle control has two stages : rough servo loop A with the acceleration control signals and servo loop B with the spindle error signals. The sequence is A→B

1) Horizontal, vertical SYNC signal separation

The playback composite SYNC signal (PBCSYNC) output from PAC005B is input to Pin 50 and the horizontal SYNC signal (PBH : Pin 37) and the vertical SYNC signal (PBV : Pin 36) are separated. The horizontal SYNC signal is separated by using equivalent pulses as a mask. That mask width is 58.3 μ s when the horizontal SYNC signal SYNC detection result is OK and 47.8 μ s when the result is NG. The detection delay time T for the vertical SYNC signal is $0.5 H < T < 1H$.

2) Acceleration control signal creation

The trinary output acceleration control signal (ACCNT : Pin 56) is created from the compulsory acceleration/deceleration command from the mechanism controller (PD0212B) or from the period detection result for PBH separated from the PBC SYNC. At PD0192A, after the end of compulsory acceleration/deceleration from the mechanism controller IC, acceleration is carried out according to the PBH period detection and when the spindle is judged to be close enough to the target rotation rate, the acceleration control signal goes to high impedance. The duty ratio can be controlled with serial commands. The result is input to the PAC003A mix amp.

3) Spindle error generation

PBH separated from the PBC SYNC and the Ref H obtained from the master clock (4fsc) are compared to create the trinary output frequency/phase error (SPERR : Pin 54). However, when PBC SYNC is not reproduced normally (when motor drive is inhibited, during compulsory acceleration/deceleration, and during CLV jumps), a 50% duty signal showing zero error is output. The phase comparison range is about 120 μ sp-p (2H). The result is input to the PAC003A loop filter.

4) Spindle driver I/F

The spindle error PWM modulation signal PWMI (Pin 57) input from PAC003A and the F/R signal (Pin 58) showing the motor drive direction are converted to the spindle driver drive signals DRVA (Pin 59) and DRVB (Pin 60) with the internal logic and output.

5) Rough servo control by FG

Discs supported

CAV, CLV, and CDV-V part are supported.

The output takes the form of serial commands to the DVP.

Disc	Mode	Servo details
CAV	Starting up	Compulsory acceleration up to 1530 rpm If the spindle is not locked within a certain period of time, a sweep operation is carried out.
	After start up	If the spindle lock is lost within a certain period of time, the servo is controlled until the normal rotation rate (in this case, 1800 rpm).
CLV	Starting up	Compulsory acceleration up to 1530 rpm If the spindle is not locked within a certain period of time, a sweep operation is carried out.
	After start up	If the spindle lock is lost within a certain period of time, the servo is controlled until the normal rotation rate (the rate stored in memory by the mechanism controller). If the spindle is still not locked, a sweep operation is carried out.
	During TCS	The servo is controlled to bring the rotation within the target rotation rate range.
CDV-V	Starting up	Compulsory acceleration up to 2295 rpm If the spindle is not locked within a certain period of time, a sweep operation is carried out.
	After start up	If the spindle lock is lost within a certain period of time, the servo is controlled until the normal rotation rate (the rate stored in memory by the mechanism controller). If the spindle is still not locked, a sweep operation is carried out.

* TCS: track count search

* A sweep operation is an operation that increases and decreases the rotation rate and searches for a rate at which PH codes can be read.

LD: 600-1939 rpm

CDV: 1690-2865 rpm

Table for microcomputer ACC/BRK control during track count search

During track count searches, the microcomputer controls to bring the rotation rate within the reference rotation rate range (FG FGT value) +33% - 40%.

For search from inner edge to outer:

BRK issued until rotation rate enters range from reference rotation rate to reference rotation rate +33%

For search from outer edge to inner:

ACC issued until rotation rate enters range from reference rotation rate to reference rotation rate -40%

	Target time	FG FGT			Rotation rate		
		-40%	Reference	+33%	-40%	Reference	+33%
1	00:00 - 02:13	15H	23H	2EH	1130	1883	2504
2	02:13 - 04:53	17H	27H	33H	1014	1690	2248
3	04:53 - 07:52	1AH	2CH	3AH	899	1498	1992
4	07:52 - 11:10	1CH	30H	3FH	824	1373	1826
5	11:10 - 14:48	1FH	34H	45H	761	1268	1686
6	14:48 - 18:45	22H	39H	4BH	694	1156	1537
7	18:45 - 23:00	24H	3DH	51H	649	1081	1438
8	23:00 - 27:40	27H	42H	57H	599	999	1329
9	27:40 - 32:30	2AH	46H	5DH	565	942	1253
10	32:30 - 37:40	2DH	4BH	63H	527	879	1169
11	37:40 - 43:10	2FH	4FH	69H	500	834	1109
12	43:10 - 50:30	32H	54H	6FH	471	785	1044
13	50:30 - 58:10	36H	5AH	77H	439	732	974
14	58:10 -	39H	5FH	7EH	416	694	923

The mechanism controller contains this table.

7.3 DIGITAL TBC AND VIDEO SIGNAL PROCESSING

The video signals demodulated by PAC005B then clamped are input to VIN (Pin 46) and converted from analog to digital.

From this digital video data, the fsc rate clock following the write-side video signal jitter is created by the PLL, then this is multiplied by four and used as the ADC sampling clock and the FIFO write clock. By reading with a standard 4fsc clock the digital data that was written into FIFO memory with the jitter-following clock, the time axis is corrected. Also drop outs are compensated for with the drop out detection signal (DOSP :

Pin 51) input from PAC005B. Then, squelch switching and 140n shift are carried out, characters are inserted with the character data (CHA : Pin 3 ; CHB : Pin 6) input from PD 0198A, SYNC is inserted internally, the result is output to pins 9 to 17 of D00 to D07.

7.4 SSG

Variable-delay composite SYNC signals are output with serial commands. Using shift, reset, and other operations for trick play is supported through modes such as Jump and Scan.

8. AUDIO SYSTEM DESCRIPTION

8.1 DIGITAL AUDIO SYSTEM

The EFM signals are extracted with a 1.75MHz low pass filter, passed through the PAC003A EFM amp, and input to Pin 8 of the DSP. The data output from Pin 35 is input to Pin 25 of PD 2026B(L), digitally processed with a digital filter, and converted into analog signals with a DAC.

8.2 ANALOG AUDIO SYSTEM

The audio FM signals extracted from the 2.3MHz (L ch) and 2.8MHz (R ch) band pass filters are demodulated by CA0002 AM, then output from Pin 13 and Pin 12.

Transistors Q201 and Q202 mute the analog audio and either digital or analog audio is selected and sent to the output terminals.

9. SELF-DIAGNOSTIC FUNCTIONS

9.1 SELF-DIAGNOSTIC FUNCTIONS

The self-diagnostic functions automatically display an error code on the TV screen and front panel fluorescent display section when there is an error. The customer checks the error code and conveys it to the service personnel to make repairs more efficient.

After an error occurs, even if the error code goes off, you can display the error code again by holding down the **CLEAR** key for 10 seconds (except a loading error **L *** display). At that time, partial error is displayed with the mechanism switch information. However, if the power cord is unplugged, the error code information is lost.

Fig. 1 TV screen display

This table explains the information for analyzing the cause when an error occurs with the CLD player.

Self-diagnostic error code	Contents	Conditions	Probable cause
H0	Spindle overcurrent detection error.	In the play state, overcurrent was detected in the spindle motor. Monitoring starts 5 seconds after the start of play or special playback mode, this error is detected if the overcurrent port is "L" for 4 seconds.	<ul style="list-style-type: none"> • Motor NG • Clamper rubbing
U0	FG abnormality error	<ol style="list-style-type: none"> ① At LD start-up, the rate of rotation calculated from the FG was less than 15 rpm for 5 consecutive seconds from the spindle run command. ② At CD start-up, there was less than 1/8th rotation even after 5 seconds had passed since the end of acceleration. ③ During play search, CD : subcodes are being read/LD : Philips codes are being read and the spindle is locked, but a state in which the rate of rotation calculated from the FG was less than 15 rpm continued for 5 seconds or more. In the above case, it is judged that an abnormality has occurred in the FG sensor and that accurate rotation rate calculation has become impossible. 	<ul style="list-style-type: none"> • FG sensor abnormality, FG signal not coming to mechanism controller • FG sensor clogged • Rubbing between FG sensor and slit • Turntable dropped • FG slit deposition NG
H1	Partial short error	<ol style="list-style-type: none"> ① At LD start-up, the speed did not reach 1200 rpm within a certain time (12 seconds) after the spindle run command. ② At CD start-up, a certain speed (313 rpm) was not reached within 6 seconds from the end of spindle acceleration. 	<ul style="list-style-type: none"> • Spindle motor NG • Commutator NG • Bearing too tight • Power supply NG
H2 A0	Power supply abnormality error	– 5V power supply abnormality detected. The power supply abnormality port is constantly monitored and if its signal stays high for about 1 second consecutively, the power supply is judged to be abnormal.	<ul style="list-style-type: none"> • – 5V not fed from SYPS assy • Parts shorted
L *	Loading error	<ol style="list-style-type: none"> ① When loading operation goes over time (approx. 10 sec.). ② When assist at disc sense entry ends and is not tilt neutral. ③ When assist at set up entry ends and is not tilt neutral. 	<ul style="list-style-type: none"> • Tilt switch 1, 2, 3 abnormal, so tilt/loading state not read in correctly • Tilt/loading mechanism mechanically locked • Drive IC NG • Power supply NG
E *	Slider error	During slider movement, a time over-run occurred (track count search 20 seconds, mandatory movement 10 seconds)	<ul style="list-style-type: none"> • Slider ceased being able to run • The slider mechanism is mechanically locked and can no longer move to its target. • Slider position switch NG • Flexible cable pulled out • Drive IC NG • Power supply abnormal
U1	Miss clamp error	<ol style="list-style-type: none"> ① During LD setup, after 1/8th rotation, the track count during 1/8 rotation exceeded 511. ② During start-up, the focus was lost once and refocusing was attempted, but the focus could not be locked. ③ Two FG pulses did not come within 800 ms from from the start of LD start-up. ④ The disc clamp operation did not end within 5 seconds. 	<ul style="list-style-type: none"> • Disc sandwiched • Disc shifted • Spindle motor NG • Disc scratched or dirty defocused during start-up • Two discs loaded • PU actuator NG • Tilt sensor NG • Tilt neutral NG (tilt base NG)

Self-diagnostic error code	Contents	Conditions	Probable cause
P *	Spindle error	① During TOC reading with an LD, the spindle servo was not locked within 60 seconds from the start of the spindle run. ② When CAV/CLV determination is not finished within 60 seconds from spindle servo lock. ③ The codes could not be read for 10 – 15 seconds consecutively for an LD or 7 – 10 seconds for a CD/CDV and the spindle servo was not locked. ④ The speed exceeded 2100 rpm during LD start up.	P0:•PH code, SUB-Q code can not be read •VCO, PLL offset out of adjustment •Disc defect P5:•PAL disc, mirror disc, etc. PLAY •No RF P6:•Spindle servo does not lock •Spindle motor NG
F *	Focus error	① "In the "no disc" state, a setup command was received from the mode controller. ② When LD is out of focus when slider is moved to starting position during set up. In case of CD/CDV is NG even after three focus tries. ③ During start-up, the maximum slider servo duty continued for 3 loops or more.	F5:•CD, LD on top of each other •LD scratched or dirty defocused during slider movement •Disc NG •Slider position switch NG F6:•Inner edge of disc scratched or dirty •Slider ran into inner edge mechanical stopper

* Besides the above errors, there is the "U2" communications error (the mode controller could not communicate normally with the mechanism controller)
 The probable cause is a defective mechanism controller, disconnected cable, etc..

* Mechanism mode contents (meaning of * for L * etc.)

9.2 FORMAT OF THE MECHANISM SWITCH INFORMATION WHICH IS TRANSMITTED TO THE MODE CONTROL IN THE ERROR OCCURRENCE

Example

• Mechanism switch information (1 7)

Mechanism control → Mode control

Communication byte address 5 (COMBUF5)

(Mode control displays this value as it is.)

Example of 1 7 is indicated as follows.

(Slider : Side B
 Tilt : Tilt +
 Position : B-INSIDE

LTSW			Loading/tilt position
1	2	3	
0	1	1	Open (Tray open state)
0	0	1	Loading (During move the tray horizontally)
1	0	1	Standby (Tray close & spindle down state)
1	0	0	Clamp (During spindle up or down)
0	0	0	Tilt - (Clamp state)
0	1	0	Tilt + (Clamp state)
1	1	0	Tilt limit (Clamp state)

SLDP			Slider position
1	2	3	
1	0	0	CD active position
1	0	1	CDV active position
1	1	0	LD active position
0	1	1	CD inside position
1	1	1	Side B inside position

10. ADJUSTMENTS

10.1 TEST MODE

1)How to start the test mode

On the MOTHER ASSY, Short circuit the test mode JP W490 and W491, the test mode is started by pressing the power switch ON. (Fig. 1)

After confirming that all FL indicators are lit, remove test mode jumper wire and GND connection.

2)How to cancel the test mode

Turn power switch OFF.

3)Functions and key control when in test mode

Fig. 1

Note : When you open the tray in test mode, the screen displays goes out. To display the screen again, press the **DISPLAY** key.

• Key Operation In the Test Mode

Player Status	Key Operation	Function	TV Screen Display
Tray Open	⏪/⏩ SKIP (Refer to Note 1)	⏪ : Shifts the tray in the closed direction and also raises the turn table while pressing the key. ⏩ : Shifts the tray in the open direction and also lowers the turn table while pressing the key.	
Tray Open	▶ PLAY	Clamps	
Clamp	▶ PLAY	Turns the disc through TRK Servo OFF	TRK-OFF
TRK Servo OFF	▶ PLAY	TRK Servo ON	TRK-ON
TRK Servo ON	▶ PLAY	TRK Servo OFF	TRK-OFF
TILT Neutral	RANDOM	TILT Servo ON	T-□:ON
TILT ON	▶ PLAY to STOP	TILT Neutral	T-□:N
TILT Neutral or ON	⏪/⏩ SKIP	Setting TILT Servo to OFF, can force TILT to move.	T-1 to T-E
Clamp	⏪/⏩ SCAN	Can force the slider to move	S-LD S-BIN S-CDV S-CD S-IN
Play	PAUSE	Still	
Play	■ STOP	Stop	
Stop	▲ OPEN	Open	
Play	+10 ↓ 0 to 9 ↓ ▶ PLAY	Set to SEARCH lead address input mode. Designates the SEARCH lead address through keys 0 to 9. Press the CLEAR [C] key if the designated address is incorrect. Searches the designated address upon pressing the PLAY key.	

Note 1 : Press SKIP (⏪/⏩) keys after the tray is set to open state by pressing OPEN (▲) key.

Because, in tray open state, pressing PLAY (▶) key causes it to set to clamp state and SKIP (⏪/⏩) keys can not function properly.

Table 1

• **Player Operation in the Test Mode**
(Disc tray is removed)

Operate the player by selecting a test mode function with the keys on the player or on the remote control unit.

• **CD PLAYBACK**

- ① Place the CD disc on the turn table.

Fig. 2

- ② Press the PLAY (▶) key once.
 (Twin gear starts to move.)
- ③ Push the cam plate (Fig. 3) in the direction of the arrow and wait until the CD disc is clamped.

Fig. 3

- ④ Press the ◀◀ or ▶▶ keys to appear "S - CD" on the TV screen display.

TV screen display

Fig. 4

- ⑤ Press the PLAY (▶) key twice, disc will be normally played back.

• **LD PLAYBACK**

Fig. 5

- ① Press the SKIP REV (◀◀) key to raise the turn table (spindle motor section) while pressing the cam plate (Fig. 3) in the direction of the arrow. Raise it to the position where the LD disc can be easily placed on the turn table. If the turn table is raised too high, lower it with the SKIP FWD (▶▶) key.
- ② Place the LD disc on the turn table and press the PLAY (▶) key once to clamp the disc.
- ③ Press the ◀◀ or ▶▶ keys to appear "S - LD" on the TV screen display.

TV screen display

Fig. 6

- ④ Press the PLAY (▶) key twice, disc will be normally played back.

10.2 ADJUSTMENT PRECAUTIONS

• Equipment and jigs needed for adjustment

- CD test disc (YEDS-18 : P/No. TX911730)
- LD test disc (LD-07 : P/No. TX913100)
- Medium-sized blade screwdriver
- Small blade screwdriver
- Large Phillips screwdriver
- Medium-sized Phillips screwdriver
- Two-channel oscilloscope (with delay)
- Frequency counter
- TV monitor
- Pick-up lens Cleanser P/No. TX945820
- Cleaning paper (Pick-up lens) P/No. TX945830

• Preparation for Adjustment

1. Disc tray removal

1. Remove the seven screws (A) fastening the bonnet and remove the bonnet.
2. With the power supply on, press the OPEN/CLOSE (LD) button and put the disc tray in the open position.
3. While pushing the hooks (B) on both sides of the rear of the disc tray inwards, pull out the disc tray.

Note: The adjustments other than "Electrical Adjustments 3. PLL OFFSET Adjustment" can be carried out with the disc tray mounted.

2. Diagnostic method of MOTHER assy

1. Remove the four screws (C) fastening the rear panel (L). (Fig. 8)

2. Remove a screw (D) fastening the front side of PCB holder. (Fig. 9)
3. Remove the two screws (E) fastening the MOTHER assy. (Fig. 9)

4. Loosen the binder for fixing flat cable in the MOTHER assy.
5. While pulling up the rear panel (L) toward the rear, MOTHER assy will be removed with the rear panel (L). Then MOTHER assy can be diagnosed by standing it as shown in Fig. 10.

Note 1: The MOTHER assy can be diagnosed with the disc tray mounted.

Note 2: When inserting the disc tray, please hold down the flat cable without hanging to the tray.

• Before adjusting mechanism system

• Centering adjustment screw and TAN adjustment screw

Note: Be careful not to turn centering adjustment screw and TAN adjustment screw past their adjustment range.

After the adjustments, apply the lock-tight to centering and TAN adjustment screws.

Do not turn the centering and TAN adjustment screws past their ranges, which are $\pm 0.75\text{mm}$ and $\pm 80^\circ$ from center. Apply the lock-tight after the adjustment.

Fig. 11 Mechanism ass'y adjustment (side A)

Centering adjustment range $\pm 90^\circ$
 TAN adjustment range \pm two turns

Fig. 12 Mechanism ass'y adjustment (side B)

• The mechanical adjustments can all be carried out with disc tray mounted.

• Notes when adjusting centering

If waveform S/N is bad and difficult to observe in "3 and 8. SPDL motor centering adjustment" use the low pass filter in diagram. (Fig. 13)

Fig. 13 Low pass filter

• Carriage ass'y position when adjusting centering

When moving slider to inner position to adjust the innermost track of disc during centering adjustment, be careful not to keep the mechanism stopper and carriage ass'y from bumping each other. (Fig. 14)

Fig. 14

• Notes when adjusting pickup ass'y

Please clean lens first when readjusting the pickup ass'y that is on this product. Also, when changing pickup ass'y, change whole carriage ass'y (VWT1110).

10.3 HOW TO REPLACE THE FLEXIBLE CABLE

① Bend the flexible cable as shown below.

Fig. 15

② Put the bended portion to hook (A) of the large hill.

③ Bend the flexible cable along the wall of large hill.

Fig. 16

④ Pull the flexible cable not to slackened after passing the (X) edge side of flexible cable through the large hill as shown in Fig. 17.

Fig. 17 Sectional plan

⑤ Put the flexible cable to hook (B) after the (Y) edge side of flexible cable is bended along the hook (B) position of the tilt base (lower), then insert to connector CN103 of the MOTHER assy.

Fig. 18

⑥ Insert the (X) edge side of flexible cable to connector of the carriage assy after passing through the FFC holder.

⑦ Move the FFC holder to touch the connector, lock the FFC holder to turn up the flexible cable to lower side.

Caution: Be sure to insert the MOTHER assy first of all for prevent the static electricity.

Fig. 19

10.4 ADJUSTMENT LOCATION

- VR607: Side A tilt offset adjustment
- VR608: Side B tilt offset adjustment
- VR604: Focus servo loop gain adjustment
- VR603: Tracking servo loop gain adjustment
- VC901: Master clock adjustment
- VR450: Output video level adjustment
- VR612: PLL offset adjustment
(Orderin adjustment)

Fig. 20 Adjustment diagram of MOTHER assy

Fig. 21 Adjustment diagram of MYCB assy

10.5 ADJUSTMENT METHOD

- CD test disc (YEDS-18 ; P/No. TX911730)
- LD test disc (LD-07 ; P/No. TX913100)

• Mechanical adjustment

Step	Adjustment name	Adjustment point	Measuring point and measuring mode	Player condition	Adjustment procedure	Waveform and connection diagram
1	Tilt offset adjustment	MOTHER assy VR607, VR608 (TILT OFFSET)		Test mode Disc not installed	Check the positions of VR607 and VR608 to the mechanical center with eyes. If their positions are shifted, set to the center.	Set to the mechanical center
2	Tangential direction angle adjustment (side A)	Carriage assy TAN adjustment screw (side A)	CN106-3 (RF)	CD test disc outer track play (See position for TAN adjustment screw) TRKG-ON, TILT-ON	Adjust so that the amplitude of the RF waveform reaches its maximum and the envelope is very clear. Apply the lock-tight after the adjustment.	V:20mV/div H:1 μsec/div AC mode CN106 RF ③ Probe CH1 (10:1) Adjust until the amplitude reaches its maximum and the envelope is very clear.
3	Spindle motor centering adjustment (side A)	Mechanism assy Centering adjustment screw (side A)	CN106-9 (TRKG error)	CD test disc inner track play (CD inside position in the program area) TRKG-OFF, TILT-ON	Adjust so that the amplitude of the tracking error waveform reaches its maximum and the envelope is very clear. Apply the lock-tight after the adjustment.	V:50mV/div H:10msec/div DC mode CN106 T ERR ⑨ Probe CH1 (10:1) Adjust until the amplitude reaches its maximum and the envelope is very clear.
4	Crosstalk check and tilt offset re-adjustment (side A)	MOTHER assy VR607 (side A) (TILT OFFSET)	TV monitor Crosstalk monitor check	LD test disc #508 still TRKG-ON, TILT-ON	If the crosstalk is pronounced, adjust VR607 until the crosstalk is not noticeable.	 If the crosstalk is pronounced adjust until the crosstalk is not noticeable.
5	Focus servo loop gain adjustment	MOTHER assy VR604 (FOCUS GAIN)	CN106-6 (FOCUS error) CH2 "X-Y mode"	LD test disc (PLAY STANDBY) Short CN106-7 (FIN) and 8 (GND), then press the PLAY key (disc not turn)	Adjust VR604 until the waveform level is $4.8 \pm 0.5V$.	Y: 100mV/div DC mode X-Y mode CN106 FOCUS ERR ⑥ Probe CH1 (10:1)
6	Tracking servo loop gain adjustment	MOTHER assy VR603 (TRACKING GAIN)	CN106-9 (TRKG error) CH2 "X-Y mode"	LD test disc #508 still TRKG-ON, TILT-ON	Adjust VR603 until the waveform level is $2.8 \pm 0.2V$.	Y: 50mV/div DC mode X-Y mode CN106 T ERR ⑨ Probe CH1 (10:1)
7	Tangential direction angle adjustment (side B)	Carriage assy TAN adjustment screw (side B)	CN106-3 (RF)	LD test disc #508 still TRKG-ON, TILT-ON	Adjust so that the amplitude of the RF waveform reaches its maximum and the envelope is very clear. Apply the lock-tight after the adjustment.	V:20mV/div H:1 μsec/div AC mode CN106 RF ③ Probe CH1 (10:1) Adjust until the amplitude reaches its maximum and the envelope is very clear.
8	Spindle motor centering adjustment (side B)	Mechanism assy Centering adjustment screw (side B)	CN106-9 (TRKG error)	LD test disc #508 still TRKG-OFF, TILT-ON	Loosen a black screw beside the centering adjustment screw (side B). Adjust so that the amplitude of the tracking error waveform reaches its maximum and the envelope is very clear. After adjustment is complete, tighten the black screw and apply the lock-tight.	V:50mV/div H:10msec/div DC mode CN106 T ERR ⑨ Probe CH1 (10:1) Adjust until the amplitude reaches its maximum and the envelope is very clear.
9	Crosstalk check and tilt offset re-adjustment (side B)	MOTHER assy VR608 (side B) (TILT OFFSET)	TV monitor Crosstalk monitor check	LD test disc #508 still TRKG-ON, TILT-ON	If the crosstalk is pronounced, adjust VR608 until the crosstalk is not noticeable.	 If the crosstalk is pronounced adjust until the crosstalk is not noticeable.

(NOTE) • This adjustment can be thought to be about the same adjustment as on the manufacturing line with differing adjustment tools. Follow the adjustment procedures even for checking the adjustments.
 • When you open the tray in test mode, the screen displays goes out. To display the screen again, press the **DISPLAY** key.
 • The mechanical adjustments can be all carried out with disc tray mounted.

- CD test disc (YEDS-18 : P/No. TX911730)
- LD test disc (LD-07 : P/No. TX913100)

• Electrical adjustment

Step	Adjustment name	Adjustment point	Measurement point	Player condition	Adjustment procedure	Waveform and connection diagram
1	Master clock adjustment	MOTHER assy VC901	MYCB assy IC203-4 (2 fsc)	Power ON	Adjust VC901 so that frequency with power on is $7.159090\text{MHz} \pm 20\text{Hz}$. Connect video output terminal and oscilloscope. (Video output terminal is terminated with 75Ω)	
2	Output video level adjustment	MOTHER assy VR450 (VIDEO LEVEL)	Video output terminal	Normal mode LD test disc #20, 700 still	Adjust VR450 so that level from video signal sync tip to 100% white becomes $1\text{Vp-p} \pm 5\%$. (It's possible to terminate video output terminal with 75Ω by connecting TV monitor)	
3	PLL OFFSET adjustment	MOTHER assy VR612 (PLL OFFSET)	MOTHER assy W335 (PLL OFFSET TP)	Test mode CD test disc play TRKG servo OFF/ON	Note: Before adjusting remove disc tray. With the tracking servo off, playback digital audio and roughly adjust VR612 so that the sound is audible. Connect W335 and a DC voltmeter and while playing back digital audio, switch the tracking servo on and off and adjust VR612 so that the difference between the DC voltage when the tracking servo is on and when it is off is no greater than $0 \pm 0.1\text{V}$.	

11. IC INFORMATION

- The information shown in the list is basic information and may not correspond exactly to that shown in the schematic diagrams.

● **Block Diagram**

● **Pin Function**

No.	Pin Name	Function
1	DOS OUT	Drop out pulse output.
2	VCC3	VCC for SYNC SEP section.
3	SYNC OUT	Composite sync output.
4	DATA OUT	Data pulse output.
5	GATE FILT	Connect a capacitor for Gate - Gate.
6	DOS INH	Clamp pulse and clamp killer control.
7	GND3	GND for SYNC SEP section.
8	TOP	Reference DC (TOP) for A/D.
9	LPF MONI	Monitor the LPF for SYNC SEP.
10	VIDEO OUT	Signal output for A/D.
11	BOTTOM	Reference DC (BOTTOM) for A/D.
12	AMP IN	Sync chip clamp input.
13	GND2	GND for VIDEO.
14	NR OUT	Noise reduction output.
15	VCC2	VCC for VIDEO section.
16	NR2 IN	Signal input (2) for noise reduction.
17	NR2 MONI	Limiter output for noise reduction.
18	NR1 IN	Signal input (1) for noise reduction.
19	NR ADJ	Limiter level adjusting pin for noise reduction.
20	NR CONT	Noise reduction (1, 2) select and limiter control.
21	DEEM OUT	De-emphasis output.
22	DEEM IN	De-emphasis input.
23	REG FILT	Connect a capacitor for regulator.
24	GND1	GND for RF section.
25	DEMO OUT	Demodulation output of RF signal.
26	DEMO VCC	VCC for FM demodulation output.
27	DEMO IN	RF input for FM demodulation.
28	VCC1	VCC for RF section.
29	DOS IN	RF input for DOS.
30	FDOS ADJ	FDOS sensitivity adjustment.

PD0192A (MOTHER ASSY IC500)
• DIGITAL VIDEO PROCESSOR

• Block Diagram

• Pin Function

No.	Pin Name	Function
1	RVDD	Power pin for reference system. Connect to +5V.
2	XSGCSY	Reference composite sync. is output at negative logic. Delay can be controlled by serial command.
3	WFM	MEMSYS : 1 Field monitor output for write system. Outputs "H" when in odd field.
	XCHA	MEMSYS : 0 Character input pin. Inputs "L" during character insertion.
4	XTBCH	MEMSYS : 1 TBC H sync. output. Outputs time base-corrected (TBC) H sync. at negative logic.
	REFLOCK	MEMSYS : 0 SSG phase detection signal output. Outputs "H" when phase difference of H, V sync. between Playbacksystem (after TBC) and SSG system is small enough.
5	XTBCV	MEMSYS : 1 TBC V sync. output. Outputs time base-corrected V sync. at negative logic.
	GHCK	MEMSYS : 0 Clock output for character generator. Output 2fsc.
6	FCH	MEMSYS : 1 Field change input. Switches field of SSG when "H".
	XCHB	MEMSYS : 0 Character frame input pin. Inputs "L" when character frame is inserted.
7	XRCK	Reference CLK is reversed and output.
8	RCK	Reference CLK output.
9	DO7	Data output 7
10	DO6	Data output 6
11	DO5	Data output 5
12	DO4	Data output 4
13	DO3	Data output 3
14	DO2	Data output 2
15	DO1	Data output 1
16	DO0	Data output 0
		Outputs TBC (time base-corrected) video signal to support memory. This setting performs by serial command. DO7 is MSB, DO0 is LSB.
17	VOUT	DAC output of TBC video signal.
18	DAVDD	Power pin for D/A converter. Connect to +5V.
19	DAREF	D/A converter reference for video. Normally connect to DAGND via 0.1 μF of laminated ceramic capacitor.
20	DAGND	Ground pin for D/A converter. Connect to GND.
21	DC01GND	Ground pin for DCO. Connect to GND.
22	IBIAS	Current setting pin of bias circuit. Normally connect to DAGND via external resistor (10k Ω).
23	DC01VDD	Power pin for DCO. Connect to +5V.

No.	Pin Name	Function
24	DCO0	DCO output pin. ADCK is generated by multiplying this signal by 4.
25	DCO6	Waveform shaping input pin 6. Inputs signal of DCO5 output signal that is delayed 35 ns (self-biased).
26	DCO3	Waveform shaping input pin 3. Inputs signal of DCO2 output signal that is delayed 70 ns (self-biased).
27	DCO1	Waveform shaping input pin 1. Inputs DCO0 signal via band-pass filter of fsc (self-biased).
28	DCO2VDD	Power supply pin for multiplied by 4 section. Connect to +5V.
29	DCO2	Waveform shaping output pin 2. Outputs signal of waveform of DCO1 signal that is shaped.
30	DCO4	Waveform shaping output pin 4. Outputs signal of waveform of DCO3 signal that is shaped.
31	DCO5	Waveform shaping output pin 5. Outputs signal multiplied by 2.
32	DCO7	Waveform shaping output pin 7. Outputs signal multiplied by 4.
33	DCO2GND	Ground pin for multiplied by 4 section. Connect to GND.
34	ADCK	CLK input pin for write system. Inputs signal of DCO7 output signal that is filtered through 4 fsc ceramic filter. (self-biased)
35	ACOM	Jitter correction signal output for analog audio. Used to cancel the jitter of analog audio.
36	XPBV	V sync. output for playback system. Outputs signal that has V sync. separated from pin 50 (XPBCSY) signal at negative logic.
37	XPBH	H sync. output for playback system. Outputs signal that has H sync. separated from pin 50 (XPBCSY) signal at negative logic.
38	TBCLOCK	PLL LOCK detection signal output. Outputs "H" when spindle servo loop and TBC servo loop are locked.
39	XSLATCH	Serial interface latch signal input. Generates timing to latch data that was input to serial interface. (latched at L, Schmitt trigger input)
40	SCK	Serial interface CLK input. CLK input for serial interface. SDATA value is read at rising edge. (Schmitt trigger input)
41	SDATA	Serial interface data input. Inputs data to serial interface. (Schmitt trigger input)
42	XRST	System reset input. Initializes internal registers of IC at negative logic. (Schmitt trigger input)
43	ADGND	Ground pin for A/D converter. Connect to GND.
44	RBT	A/D converter bottom reference input. Inputs bottom reference voltage of A/D converter.
45	ADVDD	Power supply pin for A/D converter. Connect to +5V.
46	VIN	A/D converter input. Inputs composite video signal.
47	RTP	A/D converter top reference input. Inputs top reference voltage of A/D converter.
48	WGND	Ground pin for write system. Connect to GND.
49	WVDD	Power pin for write system. Connect to +5V.
50	XPBCSY	Composite sync. input for playback system. Inputs composite sync. for playback system at negative logic. (Schmitt trigger input)
51	DOSP	Drop out pulse input. Inputs drop out detection pulse at positive logic. (Schmitt trigger input)
52	TO0	Tracking open pulse input. Inputs tracking open pulse at positive logic. (Schmitt trigger input)
53	XI/512	Master clock 512 division output. Outputs clock of master clock (4fsc) that is divided by 512.
54	SPERR	Spindle error PFD error output. Outputs result after performing PFD on PBH and RefH at tri-state.
55	GCONT	Spindle gain control output. Outputs PWM signal according to set value (GD0 – GD3), using serial instructions.
56	ACCNT	Accelerated control output. Outputs acceleration/deceleration signal by forced acceleration/deceleration and PBH sync. frequency detection at tri-state.
57	PWMI	Spindle error PWM input. Inputs signals that have voltage compared between spindle errors that passed through a loop filter and chopping waves. (Schmitt trigger input)
58	FR	Spindle error direction component input. Inputs signals that have voltage compared between spindle errors that passed through a loop filter and target voltage. (Schmitt trigger input)
59	DRVA	Transistor control signal output pin for spindle motor drive. This setting is performed by the interface corresponding to the brush motor and brushless motor.
60	DRVB	Transistor control signal output pin for spindle motor drive. This setting is performed by the interface corresponding to the brush motor and brushless motor.
61	TEST	Input pin for IC test. Fixed to "L".
62	RGND	Ground pin for reference system. Connect to GND.
63	XO	Oscillation output. Connect the X'tal (4 fsc) for oscillation.
64	XI	Oscillation input. Connect the X'tal (4 fsc) for oscillation.

■ PD0212B (MOTHER ASSY IC101)
• MECHANISM CONTROL IC

• Pin Function

No.	Pin Name	I/O	Function
1	VCC	I	Power supply pin. Apply 5V ± 10%.
2	RFCORR	O	RF correction switch signal output. "H"=gain UP CD,CDV – A:Low, CAV inner circuit gain up, others are High.
3	MUTE	O	Audio mute control signal output of audio system. L : Release MUTE , H : MUTE
4	SRDMUTE	O	Mute control signal output for AC3. Release MUTE during playback. L : Release MUTE, H : MUTE
5	TILT ON	O	(For debugging)Tilt operation information. H : during operation for checking tilt operation.
6	TILTERR	I A/D	This signal is A/D converted as the tilt servo control input. Control the tilt motor so that this signal becomes 2.5V.
7	TBALERR	I A/D	Tracking error balance signal input. This signal is A/D converted as the tracking offset control input.
8	SLDERR	I A/D	This signal is A/D converted as the slider servo control input. Control the tilt motor so that this signal becomes 2.5V.
9	SLDPOS	I A/D	Pickup position detection switch input. Detect the position by reading A/D input value which each switches are resistance divided.
10	XFOK	I	Focus servo lock signal input. L : Lock , H : Unlock Use for lock detection of focus servo.
11	SINGLE	I	ATT-SW of rear panel use for the single mode.This information transmit to mode control by communication. L : Single H : Normal
12	TBALDRV	O PWM	Output the tracking offset signal to PWM output, then use for auto tracking offset. 910 μsec period, tri-state control H, L, Z
13	XCD	O	LD/CD switch signal output pin. L : CD H : LD
14	XPLAY	O	Signal output during spindle servo. L : during servo H :during acceleration, brake and stop
15	SQOUT	I	Command data input from DSP. Read out SUBQ.
16	COIN	O	Command data output to DSP.
17	CQCK	O	DSP reading/writing command clock output pin. read at rising edge.
18	SLDDRV	O PWM	Slider control signal output pin. 5V=FWD, 0V=REV, 2.5V=STOP 910 μ sec period, tri-state control H, L, Z
19	SI1	I	Data input from the mode control IC.
20	SO1	O	Serial data output to the mode control IC.
21	SCK1	I/O	Clock for serial communication with the mode control IC. Becomes input mode without communicate with the mode control IC.
22	TZC	I INT	Tracking error zero cross signal input pin. Monitor this signal when searching track count in the miss clamp detection.
23	SHAKE	I/O	Hand shake signal for data communication with the mode control IC. Each microcomputer controls input/output by bilateral data line.
24	TILTDRV	I/O	LOAD/TILT control output pin. 0.5V – tray IN, OUT/tilt DOWN, UP 2.5V – STOP Use for tilt servo that tilt drive is PWM output.
25	XANA	O	Digital/Analog audio switch signal output. L : Analog H : Digital
26	XPBV	I	Playback vertical sync. signal input of LD/CDV. L :during vertical sync.
27	CNVss	I	Ground pin for A/D conversion.
28	XRESET	I	Reset signal input. L : Reset H : Release reset Mode control is controlled.
29	XIN	I	9MHz clock oscillation input pin.
30	XOUT	O	9MHzclock oscillation output pin.
31	N.C.	O	Not used.
32	GND	I	Ground.
33	SW1	I	Switch input for Loading/Tilt position detection
34	SW3	I	
35	SW2	I	

No.	Pin Name	I/O	Function
36	N.C.	I	Not used.
37	FG	I	Spindle motor FG signal input. 16 outputs per rotation. Used after dividing by 2 in microcomputer.
38	DATA	I	Input pin for Philips code decoder with built in mechanism controller.
39	XPBH	I	Playback H-SYNC input for Philips code decoder.
40	XPBV	I	Playback V-SYNC input for Philips code decoder.
41	TURNA	I	Turn switch input. H: side A L: side B
42	BINSIDE	I	Side B inside switch input. L: Side B inside H: others
43	MEMLAT	O	Serial control latch output of memory control IC (PD4510A). Latches at falling edge.
44	MEMORY	I	Memory yes/no determination input pin. H: memory yes L: memory no
45	DOCINH	O	Control the clamp pulse and clamp killer by tri-state values.
46	DETPOW	I	Use for power abnormal signal input port. L: Normal H: Abnormal
47	NROFF	O	Control output of the noise reduction by VDEM. L: Normal H: Not NR
48	WFM	I	Field determination signal from DVP. L: EVEN H: ODD
49	SQ1	O	Analog audio switch signal output 1/L. L: squelch OFF H: squelch ON
50	SQ2	O	Analog audio switch signal output 2/R. L: squelch OFF H: squelch ON
51	XCX	O	Analog audio CX noise reduction switch signal output. L: CX ON H: CX OFF
52	XVCECAN	O	Voice cancel output. L: CANCEL ON, H: OFF
53	SO3	O	Serial 3 data signal output. Serial signal is commoned, signal distinguish by latch signal (DVPLAT, TLAT).
54	SCK3	O	Serial 3 clock signal output.
55	DVPLAT	O	PD0192A serial latch signal output pin. Latches at falling edge.
56	TBCLOCK	I	Spindle lock signal input pin. L: Unlock, H: Lock
57	TLATCH	O	DAC & digital filter PD2026B serial control latch signal output pin. Latches at falling edge.
58	XREV	O	Side A/side B switch pin. H: side A, L: side B
59	DETAMP	I	Spindle over-current detection signal input pin. L: over current, H: Normal
60	FSEQ	I	Subcode sync. conformity detection signal input pin. L: Not conformity, H: Conformity
61	THOLD	I	Track jump accelerating/decelerating signal input pin. L: other H: accelerating/decelerating
62	WRQ	I	Subcode Q reading OK signal input pin. L: NG, H: OK This pin will be H when Subcode Q data passed by CRC check.
63	RWC	O	DSP read/write command signal output pin. L: READ H: WRITE
64	RWC2	I	Set to input port without influence when this pin short-circuit to pin 63.

PD4510A (MYCB ASSY IC102)
• MEMORY CONTROL IC

• Block Diagram

• Pin Function

No.	Pin Name	Name	I/O	Function
1	NC	No connection	—	To be an open circuit.
2	VDD	Power supply	—	Connect to +5 V power supply voltage.
3	GND	Ground	—	Connect to GND.
4	VDIN4	Video input 4	I	Inputs of the upper 4 bits of the data output from field memory. VDIN0 (pin 75) is the LSB and VDIN7 is the MSB.
5	VDIN5	Video input 5		
6	VDIN6	Video input 6		
7	VDIN7	Video input 7		
8	TBCV	TBC V sync input	I	Negative-logic input of time-base-corrected V sync from DVP. Used to control a write operation to field memory.
9	TBCH	TBC H sync input	I	Negative-logic input of time-base corrected H sync from DVP. Used to control a write operation to field memory.
10	WF	Field input of write system	I	Input of the field monitor signal from DVP, "H" for odd fields and "L" for even fields. Used to control a write operation to field memory.
11	CSYNC	Composite sync input of reference system	I	Negative-logic input of reference composite sync from DVP. Used for write control at squelch. (Switching between the reference sync and TBC sync is performed through a command input to the serial interface.)

No.	Pin Name	Name	I/O	Function
12	CK14M	14MHz clock input	I	Clock input. Use the same clock as DVP. To superimpose a game picture, synchronizing with the game pack is required.
13	CK14M0	14MHz reversing clock output	O	Clock output obtained by reversing CK14M input.
14	CDIN0	Chroma data input 0	I	Inputs of the chroma data output from the Y/C separation IC. CDIN0 is the LSB and CDIN7 is the MSB. When the output data is in 9 bits or more, input the upper 8 bits. To be fixed at "L" when no Y/C separation IC is used.
15	CDIN1	Chroma data input 1		
16	CDIN2	Chroma data input 2		
17	CDIN3	Chroma data input 3		
18	CDIN4	Chroma data input 4		
19	CDIN5	Chroma data input 5		
20	CDIN6	Chroma data input 6		
21	CDIN7	Chroma data input 7		
22	GND	Ground	—	Connect to GND.
23	VDD	Power supply	—	Connect +5 V power supply voltage.
24	FCHGMON	Field change signal monitor output	O	Monitor output of a field change signal which switches an even field to an odd field in the built-in sync generator block. (Do not connect to the FCHANGE input of DVP.)
25	YDIN0	Luminance data input 0	I	Input of the luminance data output from the Y/C separation IC. YDIN0 is the LSB and YDIN7 is the MSB. When the output data is in 9 bits or more, input the upper 8 bits. To be fixed at "L" when no Y/C separation IC is used.
26	YDIN1	Luminance data input 1		
27	YDIN2	Luminance data input 2		
28	YDIN3	Luminance data input 3		
29	YDIN4	Luminance data input 4		
30	YDIN5	Luminance data input 5		
31	YDIN6	Luminance data input 6		
32	YDIN7	Luminance data input 7		
33	GND	Ground	—	Connect to GND.
34	TEST	IC test input	I	For IC testing. To be open.
35	CLR	Clear input	I	Input for IC initializing. When "L," all registers and counters in the IC are set to the default values.
36	SLATCH	Serial interface latch signal input	I	Supplies a timing to latch the data input to the serial interface. "Through" in the rise period. The register contents do not change in the L/H and fall periods.
37	SCLK	Serial interface clock input	I	Clock input for the serial interface. The value of SDATA is read at the rising edge.
38	SDATA	Serial interface data input	I	Provides the serial interface with data.
39	KEY	Luminance key signal output	O	Output of L or H level to indicate the result of comparison between the luminance level of the video data input or the luminance data input with the register contents. It will be "L" when the input is larger than the reference and "H" when smaller. Input selection and reference data can be specified by changing the register contents through the serial interface. This output is delayed for 1 clock cycle with respect to the video data output.
40	TSELECT	Test mode selection input	I	Used to select the IC test mode. To be open.
41	SGCSYNCO	Composite sync output of read system (no 140ns shift)	O	Negative-logic output of composite sync from the built-in sync generator block. (For details, see pin 53.) No 140-ns shift is performed here.
42	VDD	Power supply	—	Connect +5 V power supply voltage.
43	GND	Ground	—	Connect to GND.
44	PACH	Game pack H sync input	I	Positive-logic input of the H sync from the game pack. To be open when not synchronizing with the game pack.
45	VRESET	Game pack V reset input	I	Negative-logic input of the V reset signal from the game pack. To be open when not synchronizing with the game pack.
46	CGSYNC	Game pack composite sync input	I	Negative-logic input of composite sync from the game pack. To be open when not synchronizing with the game pack.

No.	Pin Name	Name	I/O	Function		
47	RFMON	Read field monitor output	O	Monitoring output of the field signal of the built-in sync generator block. "H" for odd fields and "L" for even fields. Fixed at "H" in vertical synchronization with the game pack.		
48	CK7MO	7MHz clock output	O	Output of the clock obtained through 2-division processing on the CK14M input. It is reset at every falling edge of H sync of the read system. (When H sync falls, this clock also falls.) Used as clock input for the OSD IC.		
49	CHB	Character frame input	I	Connect the character frame output of the OSD IC when using the character superimpose function. When this is "L" and CHA is "H", the gray level is imposed on the video data. To be open when the character superimpose function is not used.		
50	CHA	Character input	I	Connect the character output of the OSD IC when using the character superimpose function. When this is "L," the white level is imposed on the video data. To be open when the character superimpose function is not used.		
51	HSYNC	H sync output of read system	O	Negative-logic output of H sync from the built-in sync generator block. When the built-in 140-ns shift function is enabled, the output is shifted for 140 ns when the CRINV signal is "H".		
52	VSYNCO	V sync output of read system	O	Negative-logic output of V sync from the built-in sync generator block.		
53	SGCSYNCO	Composite sync output of read system	O	Negative-logic output of composite sync from the built-in sync generator block. Read control from field memory is performed using this signal as the reference. The output is delayed for 1 clock cycle with respect to the video data output. It is in synchronization with HSYNC and VSYNCO. When the built-in 140-ns shift function is enabled, the output is shifted for 140 ns when the CRINV signal is "H". Synchronizing with the game pack requires signal inputs such as PACH, VRESET and CGSYNC as well as command input from the serial interface. In this case, the same 262H or 263 single field (noninterlace) mode with the composite sync of the game pack is selected. Interlace mode which uses only H sync and no V sync, can also be specified.		
54	BFP	Burst flag pulse output	O	Output of pulses to indicate the position of color burst on the video data output. It will be "L" for the position of color burst.		
55	CRINV	Chroma invert output	O	Output of the result of the chroma continuity determination on the video data input or chroma data input. When "H," chroma data of the built-in Y/C data adder is inverted, or the video data output, HSYNC and SGCSYNCO signals are shifted for 140 ns by the built-in 140-ns shift function. This can be used for equivalent functions on external devices.		
56	CSYNCO	Sync output for insertion	O	Output to insert sync on the D/A-converted video signal. It is in complete synchronization with the SGCSYNCO signal.		
57	VBLKMON	Monitor output of V blanking period	O	Negative-logic output of the V blanking period (half the H period) from the built-in sync generator block. For monitoring, but can be used on external devices.		
58	VDOU0	Video data output 0	O	Outputs of the lower 4 bits of the video data or data obtained by adding luminance data and chroma data. The output normally has a delay of 3 clock cycles with respect to the input. When the 140-ns shift function is enabled, the output is delayed for 5 clock cycles. VDOU0 is the LSB and VDOU7 (pin 68) is the MSB. Connect to the data input of the D/A converter.		
59	VDOU1	Video data output 1				
60	VDOU2	Video data output 2				
61	VDOU3	Video data output 3				
62	GND	Ground			—	Connect GND.
63	VDD	Power supply			—	Connect +5 V power supply voltage.
64	NC	No connection			—	To be an open circuit.
65	VDOU4	Video data output 4	O	Outputs of the upper 4 bits of the video data input or the data obtained by adding the luminance data and chroma data. (For details, see pins 53 through 61.)		
66	VDOU5	Video data output 5				
67	VDOU6	Video data output 6				
68	VDOU7	Video data output 7				
69	FRHMON	Free-run H sync monitor output	O	H sync monitor output of the built-in free-run H sync generator block. When the PACH signal is being supplied, this output is compared with the PACH signal. After the PACON signal is set to "L," it continues providing 910-division clocks in free-run mode as long as "L" is not input to CLR. It is not synchronized with the write or read timing. It can be used on external devices.		

No.	Pin Name	Name	I/O	Function
70	PACON	Game pack H sync detection output	O	Outputs "H" when PACH signal input is detected. For the detection, input of fifteen or more PACH pulses is required. If six or more pulses continuously fail, it is set to "L." It turns on and off the function of the built-in sync generator block to synchronize with the game pack. It is also used for VCXO on/off at external devices.
71	PD	PACH, Free-run H sync phase difference output	O	Output of L/H pulses to indicate the phase difference between the rising edge of the PACH signal and that of the H sync signal of the built-in free-run H sync generator block. An L pulse is output when PACH advances, and an H pulse when PACH follows. The pulse width indicates the phase difference. When there is no difference or when input from neither is obtained, the output is set to the high-impedance status. It can be synchronized with the game pack when connected to an external VCXO.
72	NC	No connection	—	To be open.
73	WE	Write enable output	O	Controls a write operation to field memory. "L" enables the operation and "H" disables it. Connect to the WE input of field memory.
74	WRST	Write reset output	O	Signal to initialize the write address of field memory. An L pulse for 1 clock cycle is output every other write field. Connect to the WRST input of field memory.
75	VDIN0	Video data input 0	I	Inputs of the lower 4 bits of data output of field memory. (For details, see pins 4 through 7.)
76	VDIN1	Video data input 1		
77	VDIN2	Video data input 2		
78	VDIN3	Video data input 3		
79	RE	Read enable output	O	Controls a read operation from field memory. "L" enables the operation and "H" disables it. Connect to the RE input of field memory.
80	RRST	Read set output	O	Signal to initialize the read address of field memory. An L pulse for 1 clock cycle is output every other read field. Connect to the RRST input of field memory.

13. SCHEMATIC AND PCB CONNECTION DIAGRAM

13.1 OVERALL CONNECTIONS, KEYB, FLKY, ECOB, MJBA, MJBA, SYPS, PKSB, FG, TNSB, BISB AND LMSB ASSEMBLIES

NOTE FOR SCHEMATIC DIAGRAMS (Type 4A)

1. When ordering service parts, be sure to refer to "PARTS LIST of EXPLODED VIEWS" or "PCB PARTS LIST".

2. Since these are basic circuits, some parts of them or the values of some components may be changed for improvement.

3. RESISTORS:
Unit: k Ω , M Ω , or Ω unless otherwise noted.
Rated power: 1/4W, 1/8W, 1/10W unless otherwise noted.
Tolerance: (F): $\pm 1\%$, (G): $\pm 2\%$, (K): $\pm 10\%$, (M): $\pm 20\%$ or $\pm 5\%$ unless otherwise noted.

4. CAPACITORS:
Unit: p μ F or μ F unless otherwise noted.
Ratings: capacitor (μ F) / voltage (V) unless otherwise noted.
Rated voltage: 50V except for electrolytic capacitors.

5. COILS:
Unit: m μ H or μ H unless otherwise noted.

6. VOLTAGE AND CURRENT:
V or \leftarrow V: DC voltage (V) in PLAY mode unless otherwise noted.
mA or \leftarrow mA: DC current in PLAY mode unless otherwise noted.
Value in () is DC current in STOP mode.

7. OTHERS:
● or ○ : Adjusting point.
▲ : Measurement point.
● The Δ mark found on some component parts indicates the importance of the safety factor of the parts. Therefore, when replacing, be sure to use parts of identical designation.

8. SCH - ON THE SCHEMATIC DIAGRAM:
● SCH-□ indicates the drawing number of the schematic diagram. (SCH stands for schematic diagram.)

9. SWITCHES (Underline indicates switch position):

CAUTION: FOR CONTINUED PROTECTION AGAINST RISK OF FIRE, REPLACE ONLY WITH SAME TYPE AND RATINGS ONLY.

NOTE FOR PCB DIAGRAMS:

- Part numbers in PCB diagrams match those in the schematic diagrams.
- A comparison between the main parts of PCB and schematic diagrams is shown below.

Symbol in PCB Diagrams	Symbol in Schematic Diagrams	Part Name
		Transistor
		Transistor with resistor
		Field effect transistor
		Resistor array
		3-terminal regulator

• The parts mounted on this PCB include all necessary parts for several destinations.
For further information for respective destinations, be sure to check with the schematic diagram.

WAVEFORMS AND VOLTAGE MOTHER ASS'Y MOTHER ASS'Y

Note : (No.) in the table correspond to the pin number.

Measurement condition : In case when (D. audio) is written, at time when disc that has digital audio recording is played.

■ WARNING

Components having special characteristics are marked Δ and must be replaced with parts having specifications equal to those originally installed.

- Carbon resistors (1/6W or 1/4W) are not included in the ELECTRICAL PARTS List. For the parts No. of the carbon resistors, refer to last page.

PARTS LIST

■ ELECTRICAL PARTS

ABBREVIATIONS IN THIS LIST ARE AS FOLLOWS :

C.A.EL.CHP	: CHIP ALUMI. ELECTROLYTIC CAP	L.EMIT	: LIGHT EMITTING MODULE
C.CE	: CERAMIC CAP	LED.DSPLY	: LED DISPLAY
C.CE.ARRAY	: CERAMIC CAP ARRAY	LED.INFRD	: LED, INFRARED
C.CE.CHP	: CHIP CERAMIC CAP	MODUL.RF	: MODULATOR, RF
C.CE.ML	: MULTILAYER CERAMIC CAP	PHOT.CPL	: PHOTO COUPLER
C.CE.M.CHP	: CHIP MULTILAYER CERAMIC CAP	PHOT.INTR	: PHOTO INTERRUPTER
C.CE.SAFTY	: RECOGNIZED CERAMIC CAP	PHOT.RFLCT	: PHOTO REFLECTOR
C.CE.TUBLR	: CERAMIC TUBULAR CAP	PIN.TEST	: PIN, TEST POINT
C.CE.SMI	: SEMI CONDUCTIVE CERAMIC CAP	PLST.RIVET	: PLASTIC RIVET
C.EL	: ELECTROLYTIC CAP	R.ARRAY	: RESISTOR ARRAY
C.MICA	: MICA CAP	R.CAR.	: CARBON RESISTOR
C.ML.FLM	: MULTILAYER FILM CAP	R.CAR.CHP	: CHIP RESISTOR
C.MP	: METALLIZED PAPER CAP	R.CAR.FP	: FLAME PROOF CARBON RESISTOR
C.MYLAR	: MYLAR FILM CAP	R.FUS	: FUSABLE RESISTOR
C.MYLAR.ML	: MULTILAYER MYLAR FILM CAP	R.MTL.CHP	: CHIP METAL FILM RESISTOR
C.PAPER	: PAPER CAPACITOR	R.MTL.FLM	: METAL FILM RESISTOR
C.PLS	: POLYSTYRENE FILM CAP	R.MTL.OXD	: METAL OXIDE FILM RESISTOR
C.POL	: POLYESTER FILM CAP	R.MTL.PLAT	: METAL PLATE RESISTOR
C.POLY	: POLYETHYLENE FILM CAP	RSNR.CE	: CERAMIC RESONATOR
C.PP	: POLYPROPYLENE FILM CAP	RSNR.CRYS	: CRYSTAL RESONATOR
C.TNTL	: TANTALUM CAP	R.TW.CEM	: TWIN CEMENT FIXED RESISTOR
C.TNTL.CHP	: CHIP TANTALUM CAP	R.WW	: WIRE WOUND RESISTOR
C.TRIM	: TRIMMER CAP	SCR.BND.HD	: BIND HEAD B-TITE SCREW
CN	: CONNECTOR	SCR.BW.HD	: BW HEAD TAPPING SCREW
CN.BS.PIN	: CONNECTOR, BASE PIN	SCR.CUP	: CUP TITE SCREW
CN.CANNON	: CONNECTOR, CANNON	SCR.TERM	: SCREW TERMINAL
CN.DIN	: CONNECTOR, DIN	SCR.TR	: SCREW, TRANSISTOR
CN.FLAT	: CONNECTOR, FLAT CABLE	SUPRT.PCB	: SUPPORT, P.C.B.
CN.POST	: CONNECTOR, BASE POST	SURG.PRTCT	: SURGE PROTECTOR
COIL.MX.AM	: COIL, AM MIX	SW.TACT	: TACT SWITCH
COIL.AT.FM	: COIL, FM ANTENNA	SW.LEAF	: LEAF SWITCH
COIL.DT.FM	: COIL, FM DETECT	SW.LEVER	: LEVER SWITCH
COIL.MX.FM	: COIL, FM MIX	SW.MICRO	: MICRO SWITCH
COIL.OUTPT	: OUTPUT COIL	SW.PUSH	: PUSH SWITCH
DIOD.ARRAY	: DIODE ARRAY	SW.RT.ENC	: ROTARY ENCODER
DIODE.BRG	: DIODE BRIDGE	SW.RT.MTR	: ROTARY SWITCH WITH MOTOR
DIODE.CHP	: CHIP DIODE	SW.RT	: ROTARY SWITCH
DIODE.VAR	: VARACTOR DIODE	SW.SLIDE	: SLIDE SWITCH
DIOD.Z.CHP	: CHIP ZENER DIODE	TERM.SP	: SPEAKER TERMINAL
DIODE.ZENR	: ZENER DIODE	TERM.WRAP	: WRAPPING TERMINAL
DSCR.CE	: CERAMIC DISCRIMINATOR	THRMST.CHP	: CHIP THERMISTOR
FER.BEAD	: FERRITE BEADS	TR.CHP	: CHIP TRANSISTOR
FER.CORE	: FERRITE CORE	TR.DGT	: DIGITAL TRANSISTOR
FET.CHP	: CHIP FET	TR.DGT.CHP	: CHIP DIGITAL TRANSISTOR
FL.DSPLY	: FLUORESCENT DISPLAY	TRANS	: TRANSFORMER
FLTR.CE	: CERAMIC FILTER	TRANS.PULS	: PULSE TRANSFORMER
FLTR.COMB	: COMB FILTER MODULE	TRANS.PWR	: POWER TRANSFORMER ASS'y
FLTR.LC.RF	: LC FILTER,EMI	TUNER.AM	: TUNER PACK, AM
GND.MTL	: GROUND PLATE	TUNER.FM	: TUNER PACK, FM
GND.TERM	: GROUND TERMINAL	TUNER.PK	: FRONT-END TUNER PACK
HOLDER.FUS	: FUSE HOLDER	VR	: ROTARY POTENTIOMETER
IC.PRTCT	: IC PROTECTOR	VR.MTR	: POTENTIOMETER WITH MOTOR
JUMPER.CN	: JUMPER CONNECTOR	VR.SW	: POTENTIOMETER WITH ROTARY SW
JUMPER.TST	: JUMPER, TEST POINT	VR.SLIDE	: SLIDE POTENTIOMETER
L.DTCT	: LIGHT DETECTING MODULE	VR.TRIM	: TRIMMER POTENTIOMETER

Note) Those parts marked with "#" are not included in the P.C.B. ass'y.

Parts List for Carbon Resistors

Value	1/4W Type Part No.	1/6W Type Part No.	Value	1/4W Type Part No.	1/6W Type Part No.
1.0 Ω	HJ35 3100	HF85 3100	10 kΩ	HF45 7100	HF45 7100
1.8 Ω	HJ35 3180	*	11 kΩ	HF45 7110	HF45 7110
2.2 Ω	HJ35 3220	HF85 3220	12 kΩ	HJ35 7120	HF85 7120
3.3 Ω	HJ35 3330	HF85 3330	13 kΩ	HF45 7130	HF45 7130
4.7 Ω	HJ35 3470	HF85 3470	15 kΩ	HF45 7150	HF45 7150
5.6 Ω	HJ35 3560	HF85 3560	18 kΩ	HF45 7180	HF45 7180
10 Ω	HF45 4100	HF45 4100	22 kΩ	HF45 7220	HF45 7220
15 Ω	HJ35 4150	HF85 4150	24 kΩ	HF45 7240	HF45 7240
22 Ω	HF45 4220	HF45 4220	27 kΩ	HJ35 7270	HF85 7270
27 Ω	HJ35 4270	HF85 4270	30 kΩ	HF45 7300	HF45 7300
33 Ω	HF45 4330	HF45 4330	33 kΩ	HF45 7330	HF45 7330
39 Ω	HJ35 4470	HF85 4390	36 kΩ	HF45 7360	HF45 7360
47 Ω	HF45 4470	HF45 4470	39 kΩ	HF45 7390	HF45 7390
56 Ω	HF45 4560	HF45 4560	47 kΩ	HF45 7470	HF45 7470
68 Ω	HF45 4680	HF45 4680	51 kΩ	HF45 7510	HF45 7510
75 Ω	HF45 4750	HF45 4750	56 kΩ	HF45 7560	HF45 7560
82 Ω	HF45 4820	HF45 4820	62 kΩ	HF45 7620	HF45 7620
91 Ω	HF45 4910	HF45 4910	68 kΩ	HF45 7680	HF45 7680
100 Ω	HF45 5100	HF45 5100	82 kΩ	HF45 7820	HF45 7820
110 Ω	HJ35 5110	HF85 5110	91 kΩ	HF45 7910	HF45 7910
120 Ω	HF45 5120	HF45 5120	100 kΩ	HF45 8100	HF45 8100
150 Ω	HF45 5150	HF45 5150	110 kΩ	HF45 8110	HF45 8110
160 Ω	HJ35 5160	*	120 kΩ	HF45 8120	HF45 8120
180 Ω	HF45 5180	HF45 5180	150 kΩ	HF45 8150	HF45 8150
200 Ω	HF45 5200	HF45 5200	180 kΩ	HF45 8180	HF45 8180
220 Ω	HF45 5220	HF45 5220	220 kΩ	HJ35 8220	HF85 8220
270 Ω	HF45 5270	HF45 5270	270 kΩ	HF45 8270	HF45 8270
330 Ω	HF45 5330	HF45 5330	300 kΩ	HF45 8300	HF45 8300
390 Ω	HF45 5390	HF45 5390	330 kΩ	HF45 8330	HF45 8330
430 Ω	HF45 5430	HF45 5430	390 kΩ	HJ35 8390	HF85 8390
470 Ω	HF45 5470	HF45 5470	470 kΩ	HF45 8470	HF45 8470
510 Ω	HF45 5510	HF45 5510	560 kΩ	HJ35 8560	HF85 8560
560 Ω	HF45 5560	HF45 5560	680 kΩ	HJ35 8680	HF85 8680
680 Ω	HF45 5680	HF45 5680	820 kΩ	HJ35 8820	HF85 8820
820 Ω	HF45 5820	HF45 5820	1.0 MΩ	HF45 9100	HF45 9100
910 Ω	HF45 5910	HF45 5910	1.2 MΩ	HJ35 9120	*
1.0 kΩ	HF45 6100	HF45 6100	1.5 MΩ	HJ35 9150	HF85 9150
1.2 kΩ	HF45 6120	HF45 6120	1.8 MΩ	HJ35 9180	HF85 9180
1.5 kΩ	HF45 6150	HF45 6150	2.2 MΩ	HJ35 9220	HF85 9220
1.8 kΩ	HF45 6180	HF45 6180	3.3 MΩ	HJ35 9330	HF85 9330
2.0 kΩ	HJ35 6200	HF85 6200	3.9 MΩ	HJ35 9390	*
2.2 kΩ	HF45 6220	HF45 6220	4.7 MΩ	HJ35 9470	HF85 9470
2.4 kΩ	HJ35 6240	HF85 6240			
2.7 kΩ	HF45 6270	HF45 6270			
3.0 kΩ	HF45 6300	HF45 6300			
3.3 kΩ	HF45 6330	HF45 6330			
3.6 kΩ	HJ35 6360	HF85 6360			
3.9 kΩ	HF45 6390	HF45 6390			
4.7 kΩ	HF45 6470	HF45 6470			
5.1 kΩ	HF45 6510	HF45 6510			
5.6 kΩ	HF45 6560	HF45 6560			
6.8 kΩ	HF45 6680	HF45 6680			
8.2 kΩ	HF45 6820	HF45 6820			
9.1 kΩ	HF45 6910	HF45 6910			

CDV-W901
